SCHINDLER'S GARDEN MANUAL

FOR THE SOUTHERN STATES.

1903

Jos. A. Schindler & Co.,

Successors to SCHINDLER & VAN GEFFEN,

Gardeners AND Florists,

827 DECATUR ST.,

Opposite FRENCH MEAT MARKET.

NEW ORLEANS,

L.A.

Cumberland Phone 2095-12,

Peoples' Phone 2800.

Yours truly,
JOS. A. SCHINDLER, Principal.

HOW TO ORDER SEEDS AND SEND REMITTANCES.

Please sign your name as plain as possible and give your post office, express office and State in each and every letter you send us; this avoids delay. Cash should accompany all orders. Send money at our risk, either by postal money order, express order, cash in registered letter, or by draft or check on bank. On all orders to the amount of \$100 and over the cost of remittance by the above methods can be taken out in extra seeds. We guarantee safe arrival of all seeds in first class condition. U. S. postage stamps will also be accepted same as cash.

SEEDS BY MAIL.

We pay postage on all seeds by the packet, ounce and quarter pound. On seeds by the pound add 9 cents, by the quart 15 cents, for postage on each package.

SEEDS BY EXPRESS.

It will be cheaper to the purchaser of our seeds by the pounds and gallons to have them sent by express; as the rates made on seeds are 20 per cent. less from the regular rates on merchandise.

ORDERS BY RAILROAD, FREIGHT OR BOAT.

We advise all customers to have *all orders in bulk* shipped either by rail or boat in order to secure lower rates. If freight has to be prepaid, please advise us when sending in your orders.

Orders in German, French and Italian solicited and promptly attended to.

SCHINDLER'S

Garden Manual and Seed Catalogue,

FOR

1903.

SALUTATORY.

As we are entering the new era of the year 1903, with the prospects bright for progressiveness and prosperity, it is with pleasure that we take the initiative step in presenting our first issue of a garden manual and catalogue to our friends, patrons and the public in general. We have been in the seed business for the past seven years, and by constant and strict attention to the wants of our patrons for fresh and reliable seeds of standard quality, *true to name*; we have secured two-thirds of the market gardeners' and truck farmers' trade in this vicinity. We are now branching out to secure the patronage of our country friends who are engaged in the gardening and truck farming business and who will find it to their advantage in making their purchases from us for seeds of all kinds. As the old saying goes, "Great oaks from little acorns grow". Our business is increasing every season and each year's business is much larger than any before. Why! because our seeds are the best for the Southern garden, and none better can be had. Our seeds are grown for us by the largest and most responsible growers in the United States and Europe and are always tested as to their vitality and germinating qualities.

JOSEPH A. SCHINDLER & CO.

MERCHANTS send in your orders to us; as they always prove satisfactory. Write us for special discount.

Mr. Schalck was confidential clerk of the late well known **Seedsman Richard Frotscher** under whose tutelage he worked for sixteen years; or up to the time of Mr. Frotscher's demise. He has had the experience of the seed business for the past 23 years, and is beyond a doubt one of the most skilled and efficient seedsmen in the country.

J. A. SCHALCK,
Manager Seed Department,

FRANK J. REYES,
Manager Floral Department.

Mr. Reyes is one of the most artistic flower workers and decorators in this city. He had several years experience in the floral line and with his assistance we are in a position to turn out first-class work of all kinds.

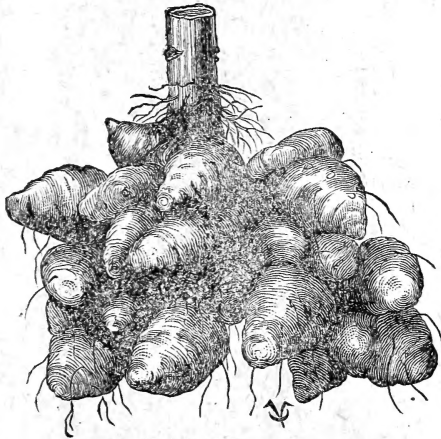

All flower work entrusted to us will always be tastefully and artistically executed. All orders are promptly filled on short notice.

ARTICHOKE.

Large Globe.

LARGE GLOBE.—The only and best variety grown for the home market, as well as for shipping. The most successful plan in growing this vegetable is to set out the suckers or plants, taken from the old stock in the fall and early winter and plant them about 4 feet apart each way. They can also be grown from seed; which should be sown during October and November, and in early spring.

Artichoke Jerusalem.

—This kind is only grown from the tubers and invaluable for feeding hogs on account of their fattening properties. They are the best hog-food known; a preventative of cholera and other hog diseases. They are well adapted to any soil where corn and potatoes can be grown. One acre planted in Jerusalem Artichoke roots will keep about 25 or 30

hogs in fine condition; if turned into the field from October to April and letting them root for the tubers. Three bushels of tubers are sufficient to plant one acre; cut to two eyes, same as potatoes. Plant from January to April, in furrows about three to four feet apart, dropping the tubers about eighteen inches apart and cover with a plow. When they are well up, plow them as you would corn.

ASPARACUS.

Col. Mam. White.

CULTURE.

Sow one ounce for sixty feet of drill. Sow in March or April, in rows one foot apart. When two years old transplant into permanent beds, which should be well and deeply manured, and trenched to a depth of two feet. Set the plants (in rows) from three to

four feet apart, and two feet in the rows, spreading out the roots, and covering from six to eight inches. On the approach of winter cover with manure or compost; fork the beds early in the spring, and apply a dressing of salt. Cut for use the second year after planting in permanent bed.

ASPARAGUS SEED.

COLUMBIAN MAMMOTH WHITE—A new and entirely distinct variety, that produces shoots that are white, and remain white as long as fit for use. In addition to this advantage it is more robust and vigorous in habit, and throws up larger shoots and fully as many of them as Conover's Colossal and requires no earthing up, as in the green sorts, in order to furnish the white shoots so much sought after. This grand result in producing a white asparagus did not come by chance, but was the outcome of years of patient work and careful selection by the originator.

CONOVER'S COLOSSAL.—The standard variety; of large size, tender and of excellent quality.

ASPARAGUS ROOTS.

COLUMBIAN MAMMOTH WHITE.—2-year-old roots.

CONOVER'S COLOSSAL.—2-year-old roots.

Prices on any variety of 2-year-old roots: per 100, 75c; per 1,000, \$6.00.

BUSH BEANS.

GREEN POD VARIETIES.

CULTURE.

Place in rows eighteen inches apart; drop a bean every two or three inches. Plant from end of February, and for succession, every two or three weeks to May. Bush Beans planted in this latitude during June and July, will not produce much. August and September are good months in which to plant again; they will produce abundantly till killed by the frost. Do not cover the seeds more than two inches.

NOVELTY.

FRENCH MARKET GREEN POD BUSH BEAN Introducing this novelty, we have one of the finest round pod bush beans ever introduced. It is as early as the Ex. Ey. Refugee; but far superior to it; as it produces beautiful long, green, round and straight pods. Does not wilt as quickly as other varieties and is therefore well adapted for shipping and market. We predict that when this bean is better known, it will become the leading sort for the market and the gardeners' favorite.

Do you want to make a success in gardening? if so buy your seeds from us,

BEST OF ALL. The hardy, vigorous vine produces an abundance of very straight, handsome round pods which, when fit for use as snaps, are very brittle and of a peculiar, deep green color. As the pods mature they become lighter in color and splashed with bright red.

EARLY MOHAWK.—This sort is so much hardier than the others that it can be planted earlier, and often will furnish beans fit for use before any other kind. Vines large, stout, with large, coarse leaves; blossoms large, purple; pods long, straight, coarse, with long, tapering points; beans long, kidney-shaped, variegated with drab, purple and brown.

EARLY YELLOW SIX WEEKS.—Vines large, vigorous, branching, productive, with large leaves and lilac blossoms; pods long,

straight, narrow, handsome, and when young, of good quality; beans long, kidney-shaped, yellowish-drab, with darker marks about the eye.

maturity is of great merit, this stringless quality is of particular value, the pods breaking as short and free as pipe stems.

EXTRA EARLY ROUND POD RED VALENTINE.—For snaps there is nothing superior to this variety among the older green-podded sorts, and many prefer it to the wax varieties. Vine erect, with coarse, dark green leaves, and large, white blossoms; pods medium length, curved, cylindrical, with crease in back, very fleshy, crisp and tender; beans medium sized, long, irregular, pink, marbled with red. We know of no stock of Red Valentine which can be compared with that we offer in tenderness and high quality of pod. It is as early as the earliest.

EXTRA EARLY REFUGEE.—This is a great improvement on the old and well-known Refugee, as it is a long way earlier, being fit to pick nearly as early as six weeks. It is more dwarf and compact in growth, while the pods are round, solid, tender, and of the most excellent quality. Very good shipper.

BUSH BEANS.

WAX PODDED VARIETIES.

WARDWELL'S DWARF KIDNEY WAX BEAN.—Hardy and productive, pods long, broad, flat, and of a delicate waxy yellow, brittle and entirely stringless. The yield considerably exceeds that of the common

STRINGLESS GREEN POD.—This new bean produces a vine similar to Red Valentine, but develops pods to edible condition two to three days earlier than Valentine, that is to say in thirty to thirty-one days from germination, which extraordinary maturity for table at once advances the Stringless Green Pod to the first rank among table beans. The pods are green, not quite so round as Valentine and less curved. The pods are stringless—absolutely so—this quality at once placing the variety at the top of the list among table beans. While the early

HARDEST AND MOST PRODUCTIVE

Golden Wax, and is equally as early. Very fine for shipping.

DAVIS KIDNEY WAX.—This is the most hardy and productive bush wax-podded bean

in cultivation. All of the pods are very long, white, straight and handsome. The vine is rustless and vigorous, bearing near the center many clusters, some of which extend above the foliage. When young, the pods are very brittle, crisp and tender. One of the best for shipping and of the greatest value for either the market or home garden.

VIOLET FLAGEOLET WAX.—Known also as "Perfection Wax." Plant very large, with large, light green leaves. Pods very long and large, being longer than those of the Scarlet Flageolet Wax. When well grown it is one of the most showy of wax beans. The pods are a little later in coming into use than the Scarlet Flageolet. It is well adapted to the south.

GRENNELL'S RUST-PROOF GOLDEN WAX.—Vine a little more upright than the Golden Wax, and the waxy-white pods are more nearly straight and proportionately broader than those of that fine variety. A very popular sort with gardeners.

VIOLET FLAGEOLET WAX.

Grenell's Rust-Proof Golden Wax.

PROLIFIC BLACK WAX.—The old standard Black Wax bush bean. It is so good that it is worthy of special notice. The pods are round, brittle, of handsome golden yellow color, and of buttery flavor when cooked. Do not forget the old meritorious kind when looking over the list, and include this in your orders.

DETROIT WAX.—The very hardy, productive, erect, growing plants bear their pods near the center of the vine, but occasionally throw a stem above the leaves. Leaves large, dark green; blossoms small, white; pods straight, flat, but thick to edge; proportionately broader than the Golden Wax. They are frequently greenish-yellow when young, but when well grown and fit for use they are of a beautiful golden wax color, and of good quality. We think this variety the least likely to rust of any, and the fact that seedsmen sometimes offer it under other names as

absolutely rust-proof is evidence that they have found it as nearly rust-proof as any wax bean. When picked at the same time as Golden Wax and other varieties, it keeps bright and crisp long after the others are wilted and unsalable, making it one of the best for shipping long distances.

DWARF LIMA VARIETIES.

BURPEE'S.—The only bush form of the true, luscious, large Lima. It is pronounced by all good judges as unquestionably the real Bush Lima. The bush grows eighteen to twenty inches high, of stout growth and always erect. It is an immense yielder, the pods being filled with very large beans.

HENDERSON'S.—This is a bush form of the small Seiva pole bean. It is the original bush form of the pole beans. It is the most productive of any, and on the whole is a vegetable of great merit.

COPYRIGHTED
1889
BY A. BLAND

POLE OR RUNNING BEANS. CULTURE.

Lima Beans should not be planted before the ground has become warm in spring. Strong poles ought to be set in the ground from four to six feet apart, and the ground drawn around them before the seed is planted. It is always best to plant after a rain and with the eye of the bean down. The other varieties can be planted flat, and not more than three to four feet apart, and hilled after they are up. Do not cover the seeds more than two inches; one inch is enough for the Southern Prolific and Crease Back.

TRUCK-FARMERS write to us for special prices on large quantities.

SOUTHERN PROLIFIC.—A very prolific sort and popular in the south for snaps. Vines vigorous, with large, thin, smooth leaves; blossoms white; pods produced in clusters, green, cylindrical, or thicker than broad, long, fleshy, crisp; beans small, oval, dun-colored, and somewhat variable in shade.

LAZY WIFE.—The pods are produced in great abundance and measure from 6 to 8 inches in length; they are broad, thick, very fleshy and entirely stringless. The pods retain their rich, tender and stringless qualities until nearly ripe and are unsurpassed in all stages. Each pod contains 6 to 8 round, white Beans, which make excellent Winter shell Beans. They are late to mature, but are valuable to extend the season. This is an excellent Bean and is sure to give satisfaction.

SOUTHERN PROLIFIC.

WHITE CREASEBACK.

WHITE CREASEBACK.—This variety is especially valuable for its extreme earliness and its habit of perfecting all of its pods at the same time. Vines small to medium, but vigorous, and in good soil wonderfully productive, bearing pods in clusters of from four to twelve. Pods medium length, round, with crease in back, silvery green, of the best quality as snaps, and stand shipping better than most sorts.

DUTCH CASE KNIFE.—Vines moderately vigorous, climbing well, but twining more loosely than some, and so may be used for a corn hill bean. Leaves large, crumpled; blossoms white; pods very long, flat, irregular, green, but becoming creamy-white; beans broad, kidney-shaped, flat, clear white, and of excellent quality.

POLE LIMA BEANS.

SMALL WHITE LIMA, CAROLINA, OR SIEVA.—Vines vigorous, with many short branches, so that they are sometimes grown without poles; very early and productive, with small, smooth, dark green leaves and small, yellowish-white blossoms; pods short, curved, thin, flat; beans white, small, kidney-shaped.

LARGE WHITE LIMA.—Too late for the extreme north, and is being supplanted by Seibert's Early Lima Bean, because the latter is earlier. Vine tall growing, vigorous, but slender; leaves medium sized, smooth, light green; blossoms small, white; pods borne in clusters, long, broad, very thin, dark green; beans large, ovoid, kidney-shaped, greenish-white, flat.

SEIBERT'S EARLY LIMA BEAN—One of the finest large Limas ever introduced. The vine is so productive that, although the pods rarely contain more than four beans, the yield is enormous, and is produced from the very first to the last of the season. The green-shelled beans are of immense size, and are tender and succulent.

In earliness, ease of shelling, size, beauty and quality of the green beans, this variety is far in advance of all other sorts.

It is recognized as the best of all the Limas for either the garden or market. Give it a trial.

EARLY GOLDEN CLUSTER WAX.—A well known, early and very beautiful sort. Vines large, strong growing, vigorous, hardy; leaflets large, light green, crimped; flowers yellowish-white; pods six to eight inches long, borne in abundant clusters, each containing from three to six pods; these are broad, very thick and fleshy, deeply creased

along the edge to which the beans are attached and much curved; color bright golden yellow. Of the very best quality, and staying in condition for use a long time. The beans are also excellent shelled green. We recommend this variety as furnishing the largest and handsomest pods of any sort in the list.

GOLDEN WAX FLAGEOLET.—It is the best Wax Pole Bean in cultivation, surpassing in length and delicacy of flavor all other Wax varieties. It is a very strong grower, which is wanting by most of the Wax Pole kinds. It bears abundantly, is entirely stringless, and does not spot, even by too much rain or other untoward weather. Cannot be too highly recommended.

BEET. CULTURE.

The ground for beets should be rich and well spaded or plowed. Sow in drills twelve to eighteen inches apart, cover the seed about one inch deep. When about a month old, thin them out to four or six inches apart. In this latitude beets are sown from January till the end of April, and from the middle of July till the middle of November; in fact, some market gardeners sow them every month in the year. In the summer and fall it is well to soak the seeds over night and roll in plaster before sowing.

Four of the best varieties. Detroit Dark Red, Improved Egyptian, Eclipse and Edmunds Early Blood Turnip
CROSBY'S EGYPTIAN.—SELECTED STOCK.
The earliest Beet in the market. A selection

from that standard market Beet, Early Egyptian, which retains the earliness of the parent stock and has added thickness, giving it a more desirable shape; it is the deepest red, almost black in color, and is of finer quality than the Egyptian, being sweeter and even more tender and smoother. The most desirable sort for small beets for early market, as it is in presentable shape quicker than any of the others. It is a very rapid grower.

EARLY ECLIPSE.—Tops small, dark purplish-green shading to lighter color on outside of leaves. Roots nearly globular, with small tap root and very small collar. Flesh dark red, zoned with a lighter shade, very sweet, crisp and tender, especially when young.

Schindler's Crescent City.

IMPROVED EARLY EGYPTIAN.—The best variety for forcing and excellent for first early crop out of doors, being very early, with small top. Leaf stems and veins dark red, leaf dark green, dotted with red; roots very dark red, rounded on top, but flat beneath with very small tap roots; flesh dark red, zoned with lighter shade, hard, crisp and tender when young, but becoming woolly with age. Our seed is a special selection of the darkest, earliest and most perfect roots with small tops.

SCHINDLER'S CRESCENT CITY.—This is one of the finest strain of Extra Early beets ever introduced and has become one of the market gardener's favorites for the home market, as well as for shipping. The color is dark red and it is of fine quality, not stringy

and much sweeter than most other kinds. Leaf dark green, mottled with red and deep red ribs; has only one small tap root and no side shoots. Recommend them highly and are worthy of a trial.

DETROIT DARK RED TURNIP.—A grand beet for bunching for market; tops exceptionally small and upright; roots are perfect turnip shape with small tap roots. Color of skin dark blood red; flesh bright red. Quality is of the very best, sweet, tender and lasting. One of the best for the market gardener and the home garden.

EDMAND'S EARLY BLOOD TURNIP.—The roots are of good form, round, with only one single small tap root; the flesh is of a deep blood red color, and very sweet and tender. They can be planted very closely, as they do not grow large and coarse, and have a very small top. It is one of the best for the market gardener and for table use.

IMPROVED EARLY BLOOD TURNIP.—An extra selected stock of blood turnip, having larger, coarser tops and roots than the Detroit Dark Red, and requiring a considerably longer time to mature. Excellent for summer and autumn use.

SILVER BEET OR SWISS CHARD.—This variety is cultivated for its large succulent leaves, which are used for the same purposes as Spinach. It is very popular in the New Orleans market.

BEETS FOR STOCK FEED!

MANGEL WURZEL BEET—LONG RED. A large, long variety grown for stock feeding. It stands up well above the surface; color light red; flesh white and rose colored.

FRENCH WHITE SUGAR RED TOP.—This is the sort most largely grown for stock feeding in Europe, where the superior feeding value of the sugar beets over the coarse Mangel Wurzel is generally recognized. This sort is so rich in sugar that it is sometimes grown for sugar factories. We do not recommend it for this purpose, but do as a most profitable crop for feeding stock. The numerous green leaves are quite erect and the elongated, egg-shaped root is tinged with red at the top. It is very hardy and productive, yielding about twenty tons to the acre.

BROCCOLI.

Although originating from a very distinct type, the modern improved sorts of Broccoli can scarcely be distinguished from cauliflower; the points of difference being that they are generally taller and the heads more divided. The culture is the same as that given for cauliflower.

EARLY LARGE WHITE FRENCH.—The best variety. Heads white, very compact and hard, continuing firm for a long time. A hardy, vigorous, easily grown sort.

BRUSSELS SPROUTS.

IMPROVED HALF DWARF.—The plants, which are very hardy, grow two or three feet high, and produce from the sides of the stalk numerous little sprouts which resemble very small cabbages, one or two inches in diameter. The leaves should be broken down in the fall, to give the little heads more room to grow. They should be treated in all respects like winter cabbag or kale. We offer a carefully grown strain, very hardy, and giving compact, round sprouts of large size and good quality.

BORECOLE OR CURLED KALE.

DWARF GERMAN GREENS.—A vegetable highly esteemed in the northern part of Europe, but very little cultivated in this country. It requires frost to make it good for the table. Treated the same as cabbage.

CABBAGE.

For many years Cabbage Seed has been a leading specialty with us. Our Cabbage Seeds are all grown from approved stock seeds. There is none more reliable, none that can be more implicitly depended upon to give planters uniformly satisfactory results.

CULTURE.

The requisites for complete success are: First, good seed; this plant is largely dependent upon the best seed for its success; no satisfactory results can possibly be obtained from poor stock. Second, rich, well prepared ground. Third, frequent and thorough cultivation. A heavy, moist and rich loam is most suitable. It should be highly manured and worked deep. Cabbage is sown here almost every month of the year, but the seed for the main crop should be sown from July to September. Some sow earlier, but July is time enough. For a succession, seed can be sown till November. The main crop for spring should be sown from end of October to end of November, as stated before. The raising of Cabbage for spring has become quite an item of late years; Brunswick, Crescent City and Succession should be sown a little earlier than the Early Summer—the latter kind not till November, but in a frame, so the young plants can be protected against cold weather, which we generally have between December and January. After the middle of January setting out can be commenced with. These early varieties of

Cabbage require special fertilizing to have them large. Early varieties are sown during the winter and early spring. Cabbage is a very important crop, and one of the best paying for the market gardener. It requires more work and attention than most people are willing to give, to raise Cabbage plants during the months of July and August. The most successful gardeners in raising cabbage plants sow the seeds thinly in seed beds, and water several times during the day; in fact the seed bed is never allowed to get dry from the sowing of seed till large enough to transplant. There is no danger, in doing this, of scalding the plants, as many would suppose; but, on the contrary, the plants thrive well, and, so treated, will be less liable to be attacked by cabbage flies, as they are too often disturbed during the day. Tobacco dust scattered between the plants and in the walks between the beds is a preventative against the fly.

FIRST EARLY CABBAGES

EARLY JERSEY WAKEFIELD.—The earliest and hardest heading of extra early cabbages. Best for home garden for extra early crop. Our stock is grown and selected with the greatest care, and there is none better, and there are few as good. Heads conical, very compact, solid and of excellent quality. The thick, stout leaves and compact habit make it the best for Early Spring planting.

CHARLESTON, OR LARGE WAKEFIELD.—A strain of Wakefield in which the plant is larger, and a little later, the head larger and not so pointed. On account of the fine, solid heads of this variety it is deservedly very popular with market gardeners and shippers to follow the Jersey Wakefield, which is only a few days earlier than this splendid variety.

SCHINDLER'S EXTRA EARLY FLAT DUTCH.—The earliest flat headed variety. A wonderfully compact plant, with few outer leaves, so that a great number of fine, solid heads can be produced on an acre. Although it does not come to full maturity as early as Jersey Wakefield, it becomes solid enough for use about as early, and is by far the best early sort for those markets that demand a large, round or flat cabbage. The plant is vigorous, with short stem. The leaves are large, broad, and of peculiar light green color. The heads are oval, and very large for the size of the plant, nearly equaling those of the later kinds. Splendid for Spring crop.

EARLY YORK.—Heads small, heart-shaped, firm and tender; of very erect and dwarf habit, so that they may be grown fifteen or eighteen inches apart.

EARLY LARGE YORK.—Succeeds the Early York. It is of larger size, about ten days later, more robust and bears the heat better.

EARLY WINNINGSTADT—One of the best for general use, being very hardy and sure to head, forming a hard head when most sorts fail. Those who have failed with other kinds can hope to succeed with this. It seems to suffer less from the cabbage worm than any other sort. Plant very compact, with short, thick leaves. Heads regular, conical, very hard and keep well both summer and winter. It is the hardiest, not only as regards frost, but will suffer less from excessive wet, drought, insects or disease, than any other second early sort, and will give a fair crop of heads when others fail.

ALL SEASONS.—This is the sort generally grown on Long Island for the New York market. Heads very large, round, often nearly spherical, but usually somewhat flattened; very solid and of the best quality, keeping as well as the winter sorts. Plants very vigorous and sure heading; leaves large, smooth, with dense bloom. Remarkable for ability to stand the hot sun and dry weather.

LARGE FLAT BRUNSWICK.—This certainly is one of the very best second early sorts in cultivation, particularly for the home garden. Plants have very short stems and large leaves, which start from the stem horizontally, but turn upward about the head. Head large, very flat, compact and solid, and of fine quality. We have taken pains to have our stock free from the longer stemmed, coarse plants, often seen in inferior stocks of this variety.

IMPROVED EARLY SUMMER.—This cabbage is not quite so large as the Brunswick; for fall it can be sown in August; for spring, in November and as late as January. It heads up very uniform and does not produce many outside leaves. It is hardier than the Brunswick and stands the cold and heat better.

STEIN'S EARLY FLAT DUTCH CABBAGE.—This is one of the earliest cabbages for its size. It is a sure header, very regular and well adapted for shipping. It is planted, exclusive of all other kinds, by some of the largest cabbage growers in this vicinity.

All Seasons.

CRESCENT CITY FLAT DUTCH.—The largest and best of the late market sorts. A strain of Late Flat Dutch Cabbage in which the plants are very vigorous and hardy. The leaves are very large and broad; the stem of moderate height; the head large and very solid. A hardy and very sure heading sort. Always forms a large, handsome head, which keeps better than most sorts. Particularly desirable for those who wish to raise large quantities of cabbage for winter crop. Two weeks earlier than Superior Flat Dutch.

stock, by one of the most responsible growers in Long Island, and we guarantee none better can be had.

LARGE LATE AMERICAN DRUMHEAD.—A specially selected strain of this standard variety for the main crop. It is productive and of best quality, and finds a ready sale. Almost similar to Superior Flat Dutch.

HENDERSON'S SUCCESSION.—This sort produces large, round, flattened heads which are of uniform size, very hard and of fine texture, and weigh from 10 to 15 pounds. It is a good keeper and shipper, of fine quality and certain to head, even in the most unfavorable seasons. A general favorite with gardeners or large growers.

MAMMOTH ROCK RED.—This is the best, largest heading red cabbage ever introduced, and much better than the stock offered as Red Drumhead. No one should plant the latter as long as our strain of Mammoth Rock Red can be obtained. The plant is large, with numerous spreading leaves. The head is large, round, very solid and of deep red color. Ninety-eight per cent. of the plants will form extra fine heads.

Frotscher's Superior Large Flat Dutch Cabbage.

FROTSCHER'S SUPERIOR LARGE LATE FLAT DUTCH CABBAGE.—This variety is sown by almost all the largest cabbage growers in this vicinity for a winter and late spring crop. It makes a large, solid head and keeps longer in the field without bursting than any other kind. The strain of seed we offer is grown from the old original

HOLLANDER, OR DANISH BALL HEAD.—This is one of the best for growing for distant markets or for late spring use. The plant is vigorous, rather compact-growing, with a longer stem than most American sorts and exceedingly hardy, not only in resisting cold, but also dry weather; it matures its head a little later than the Flat Dutch. The

Do you want to make a success in gardening? if so buy your seeds from us.

leaves are large, very thick, bluish-green covered with whitish bloom. The head is round, of less diameter than that of the Flat Dutch, but very solid. The leaves of the head are very thick, white and tender and not only overlap or pass by each other more than those of most sorts, but are so tightly drawn as to form an exceedingly solid head, which stands shipment better and arrives at its destination in more attractive shape than those of any other late sort. In quality it is one of the best, being very white, crisp and tender.

IMPROVED AMERICAN SAVOY.—The best of all the Savoy, either for home use or the market, and surest to head. The heads are larger, more solid and in every way better than sorts called Perfection, Green Globe or Drumhead Savoy. The plants are vigorous, very sure heading and even more densely and uniformly curled than the Early Dwarf Ulm Savoy; the heads are globular and of the very best quality.

CARROTS. CULTURE.

Requires a sandy loam, well manured the previous year, and deeply spaded up. Should be sown in drills ten to twelve inches apart, so the plants can be worked after they are up. Gardeners here generally sow them broad-cast, and often the roots are small from being crowded too much together.

Early Scarlet Horn.

EARLY SCARLET HORN.—A short, stumpy variety of medium size, very early and of fine flavor. Good for family garden.

EARLY HALF LONG SCARLET FRENCH.—POINTED ROOTED. Excellent for early market, or for field culture. Of medium size, flesh bright scarlet, brittle and of fine flavor.

CHANTENAY.—Tops medium size; necks small; roots tapering slightly but uniformly stumpy rooted and smooth; color deep orange-red; flesh very crisp and tender. Although

this is a medium early sort, it furnishes roots of usable size as early as any, is a heavy cropper and is undoubtedly one of the best for both the market and private garden, while its great productiveness makes it very desirable as a field sort.

St. Valery.

ST. VALERY.—This is the most popular variety with the market gardeners and shippers in this vicinity. It is bright red in color, a little thicker and larger than the Half Long French. It is one of the finest carrots for the market, as well as the family garden.

DANVERS.—Grown largely on account of its great productiveness and adaptability to all classes of soil. Tops medium sized, coarsely divided. The smooth and handsome roots are deep orange, of medium length, tapering uniformly to a blunt point; flesh sweet, crisp, tender and of a deep orange

color. This is a popular field variety, and although the roots are shorter, they produce as large a bulk as the longer field sorts, and are more easily harvested.

IMPROVED LONG ORANGE.—The most popular of the older sorts for farm use on mellow soil. An improvement obtained by years of careful selection of the best formed and deepest colored roots of the old Long Orange. Roots comparatively shorter than the Long Orange, and smoother, but so uniform and true that the bulk of the crop will be greater.

CAULIFLOWER.

The Cauliflower, although one of the most delicious vegetables, is but little grown except by professional gardeners, because of the erroneous notion that it is so difficult to grow that only skilled gardeners can produce it. Anyone will be reasonably certain of success with this most desirable vegetable if he carefully follows the cultural directions given below:

CULTURE.

The soil for cauliflower should be like that for cabbage, but it is better if made richer than is ordinarily used for that crop, giving a rich pasture or clover field the preference. A strong loam, neither too clayey nor too sandy, is best. Plenty of good manure, horse manure being considered best, must be well incorporated with the soil, and the latter be brought into the highest state of tilth. No application, however, can be more necessary or more useful than that of cultivator and

hoe. For late crop sow at same time as for late cabbage, and treat in the same manner.

The Italian varieties should be sown from April till July; the latter month and June is the best time to sow the Early Giant. During July, August, September and October, the Le Normands, Half Early Paris and Erfurt can be sown, but in this section the Algiers has the preference.

For spring crop the Italian kinds do not answer, but the Algiers and Half Early Paris can be sown at the end of December and during January, in a bed protected from frost, and may be transplanted into the open ground during February and as late as March. If we have a favorable season, and not too dry, they will be very fine; but if the heat sets in soon, the flowers will not attain the same size as those obtained from seeds sown in fall, and which head during December and January.

HALF EARLY PARIS.—A most excellent French variety, with good sized, uniform, close heads, which are tender and delicious. Splendid for market gardeners.

EXTRA EARLY DWARF ERFURT.—Similar in all respects to "Early Snowball," and nearly as early. It will give excellent results either in the home garden or for market use.

—Early Italian Giant.

EARLY ITALIAN GIANT.—A distinct and valuable late variety. The heads are very large, extremely white, firm and compact, and, being well protected by foliage, remain a long time fit for use. The plants should be started and transplanted early in the season to insure their full development.

EARLY SNOWBALL.—An extra Early variety, that forms exceedingly large, compact, round, very white and curd-like heads which are developed earlier than any other variety. Very good sort for planting for late Spring crop, if sown in December and January in cold frames. The seed we offer of this variety cannot be excelled for purity and quality.

Large Algier

LARGE ALGIERS.—A valuable late sort, sure to head, of the best quality and very popular with market gardeners everywhere. Plant is large, but of upright growth, the leaves protecting the heads so that they will endure uninjured a frost that would ruin other sorts. One of the very best of the late

kinds.

LE NORMAND'S SHORT STEM.—Plant hardy, compact growing, sure heading, and producing many leaves, which protect the close, solid curd, keeping it well blanched. Stands more heat than most other kinds.

Dwarf
Large Ribbed.White
Plumer.**CELERY.**
Perfection
Heartwell.White
Solid.Golden
Self-Pleaching

CELERY. CULTURE.

Sow in May and June for early transplanting, and in August and September for a later crop. Sow thinly and shade during the hot months. When the plants are six inches high, transplant into trenches about four inches deep, nine wide and two and half feet apart, made very rich by digging in rotten manure. Plants should be from 6 to 8 inches apart. When planted out during the hot months, the trenches require to be shaded, which is generally done by spreading cotton cloth over them; latanners will answer the same purpose. Celery requires plenty of moisture, and watering with soapsuds, or liquid manure, will benefit the plants a great deal. When tall enough, it should be banked up with earth from both sides in order to bleach it for the market.

GOLDEN YELLOW LARGE SOLID, or GOLDEN SELF-BLANCHING.—This is the best celery for early use. Critical gardeners depend upon our stock of this sort to produce their finest early celery. Plants of a yellowish-green color, but as they mature the inner stems and leaves turn a beautiful golden yellow, which adds much to their attractiveness and makes the work of blanching much easier. The handsome color, crispness, tenderness, freedom from stringiness and fine nutty flavor of this variety make it only necessary to be tried in order to establish it as the standard of excellence as an early sort.

WHITE PLUME.—While we are fully aware that this variety has great merit as an early market sort, being as early as any, and very attractive when fit for use, yet we do not think that it compares favorably with the Golden Yellow Solid, either in flavor or solidity, or that it will remain in condition for use as long after it is earthed up. Plants light yellowish-green, with tips of leaves almost white, and require to be earthed up but a short time before they are in condition for use. Where a fine appearing celery at a minimum amount of labor is the object, this variety will give entire satisfaction. An *Improved White Plume* with longer stems is being offered, but careful comparison with our stock shows that it is not equal in quality or so desirable as that we offer.

PERFECTION HEARTWELL.—A fine flavored, crisp and tender variety. The stalks are medium sized, round, very solid, crisp, tender, white and of exceedingly fine and nutty flavor. Excellent for market as well as family garden.

DWARF LARGE-RIBBED or KALAMAZOO—Dwarf, white, stiff variety, close habit, solid and crisp; of fine quality; ribs unusually large and broad.

GIANT PASCAL.—This is a green leaved variety developed from the Golden Yellow Large Solid, and is an excellent sort for fall and winter use. It blanches very quickly to a beautiful yellowish-white color, is very solid and crisp and of a fine nutty flavor. The stalks grow broad and thick, a single plant making a large bunch. With rich soil and high culture this variety will be wholly satisfactory.

LARGE WHITE SOLID.—A large sized, vigorous growing variety; stalks white, round, very crisp; perfectly solid and of superior flavor.

SOUP, or CUTTING CELERY.—This variety is adapted to sowing thick in rows and cutting when three or four inches high, to use for soup flavoring. It can be cut repeatedly and will furnish a succession throughout the season.

CELERY SEED FOR FLAVORING—Oz., 10c; 2 Oz., 10c; $\frac{1}{4}$ Lb., 15c; Lb., 40c.

CELERIAC. OR TURNIP-ROOTED CELERY. CULTURE.

Sow the seed at the same season and give the same treatment as common celery. Transplant the young plants to moist, rich soil, in rows two feet apart and six inches apart in

the row. Give thorough culture. As the roots are the edible portion of this vegetable, it is not necessary to earth up or "handle" it. After the roots have attained a diameter of two inches or over, they will be fit for use.

TURNIP-ROOTED.—The root of this celery is turnip-shaped and tender, having a sweeter taste and stronger flavor than other varieties. It is used principally for seasoning meats and soups. If boiled like potatoes and peeled, sliced and seasoned like potato salad, makes a delicious dish when cold.

CHERVIL.

An annual for flavoring; resembles parsley, but the foliage is much smaller and finer; has a strong aromatic taste and is used extensively here for flavoring and seasoning soups, especially oyster soup; also gives a pleasant taste when used in lettuce salad. Should be sown broadcast in fall for winter and spring cutting, and in January and February for summer use.

COLLARDS.

GEORGIA, SOUTHERN OR CREOLE.—A cabbage-like plant which forms a large, loose, open head, or a mass of leaves on a tall stem. Freezing does not injure, but rather improves their quality. Sow thick in drills, in rich ground, transplanting when four inches high, or sow in drills where the plants are to remain, and thin to two or three feet apart in the row, when of proper size. In the south sow from January to May, and August to October.

CORN SALAD.

This small salad is used during the winter and early spring months as a substitute for lettuce. It should be sown broadcast in

drills nine inches apart during fall and winter.

CHIVES.

Chives are very hardy and perennial members of the onion family. They are grown exclusively for their tops. Planted in clumps in any garden soil, they grow rapidly, and increase so as to render a division necessary. The tops appear very early in spring and can be cut throughout the season.

CRESS.

Is used as a salad in winter and spring; it is generally sown in the fall and early spring, broad-cast or in drills six inches apart.

GRAY SEEDED EARLY WINTER.—A variety that does well on upland and produces a large cluster of leaves quite similar to those of the Water Cress in appearance and quality. It is quite hardy and thrives best in the cool autumn months.

TRUE WATER.—This is quite a distinct variety of Cress with small oval leaves, and only thrives when its roots and stems are submerged in water. It is one of the most delicious of small salads and should be planted wherever a suitable place can be found.

CORN.

SWEET AND FIELD.

CULTURE.

A rich, warm, alluvial soil is best, but excellent corn can be raised on any good, ordinary soil if it is deeply and thoroughly worked before planting. Plant in hills about three feet apart, drop four or five grains and thin out to two or three. Give frequent and thorough but shallow cultivation until tassels appear; plant for a succession from February to June.

ADAM'S EARLY CORN.—This is one of the earliest varieties and is only planted by the market gardener here for the first corn for market; but it produces very small ears and is unsalable when the second early varieties come in.

LARGE EARLY ADAMS.—This is one of the leading varieties planted for our market, as it produces large sized and well filled ears and comes into market about two weeks later than Extra Early Adams.

WHITE ST. CHARLES CORN.—It is a little later than Champion White Pearl, but makes a fine crop for a late market corn; it produces very large, well filled and heavy ears and stands drought better than any other variety.

Champion White Pearl.

Improved Leaning.

Early French Market

CHAMPION WHITE PEARL.—This is one of the best late varieties for market; it is very productive and produces large, uniform and well filled ears of small grain and pure white. It is planted extensively here for the market.

EARLY FRENCH MARKET.—Of recent introduction; it has become very popular with our market gardeners, as it is very early and productive, maturing about ten days later than Large Adams. It produces large, fine, small-grained, well-filled ears. It is one of the best early corns ever introduced and is worthy of a trial.

STOWELL'S EVERGREEN SUGAR.—This standard main crop variety excels all other sorts in sweetness and productiveness. It is a fine corn for family use; in fact the best; the only fault with this kind when grown here is that the worms attack it before any other kinds and often ruin the crop.

HICKORY KING.—This is the *largest grained* and *smallest-cobbed corn* ever introduced. It produces from two to four ears to the stalk and makes splendid corn for roasting ears as well as for stock.

IMPROVED LEAMING.—One of the earliest yellow field varieties. It is not hard and flinty like most yellow corn, but sweet and nutritious and makes excellent feed and meal. Ears large, with deep, large grains and well covered by the shuck.

CUCUMBER.

CULTURE.

Cucumbers need a rich soil. Plant in hills from three to four feet apart; the hills should be made rich with well decomposed manure, and eight to ten seeds should be planted in each hill, and covered about one-half inch deep; when well up, thin out to

other White Spines. The fruits are almost cylindrical in form, slightly pointed at the ends and handsome in appearance, being perfectly smooth and not ridged as in other strains. The vines are of vigorous growth and enormously productive. The fruits retain their dark green color longer than any other variety of White Spine.

NEW ORLEANS MARKET.—This is one of the leading cucumbers planted by the market gardeners for market as well as for shipping; in fact it is the only kind used by the local shippers, if they can be had. It produces fruit from 6 to 10 inches and sometimes 14 inches long, of a dark green color which it retains longer than any other sort. In shape it is round and tapers at one end. The stock of seed we offer is grown from

Schindler's Improved White Spine.

New Orleans Market.

four plants in the hill till the vines meet. When the spring is dry the plants have to be watered, else they do not keep in bearing long. They can be planted from March till July. A great many Cucumbers are planted here in February, or even sooner, and are protected by small boxes with a pane of glass on top. These boxes are removed during the day and put back in the evening. When days are cloudy and cold, the plants are kept covered. In case of lice making appearance use tobacco dust.

SCHINDLER'S IMPROVED WHITE SPINE.—This is an improvement over all

selected stock; none better to be had.

EARLY CLUSTER.—Early, short and prickly; it bears in clusters.

PROLIFIC PICKLING.—A slim and slender pickle, from 3 to 5 inches long, covered with black hairy spines. The fruits are of

For fresh Seeds True to Name send your order to us.

Long Green Turkey.

the deepest green, which, combined with its brittle crispness, renders it an ideal pickle. When in the pickling stage the cucumbers show no sign of seed.

LONG GREEN TURKEY.—A long variety attaining a length of from fifteen to eighteen inches when well grown. Very fine and productive.

JAPANESE CLIMBING.—While all cucumbers are running vines, yet this variety

is much more creeping, or climbing in its habit, so much so that it quickly climbs on poles or trellises in the same manner as the Pole Lima bean. It is entirely distinct. The quality is splendid. It is well adapted for pickling, as well as for slicing for salads. The great advantage of having a cucumber which can be trained on a pole or a fence will be apparent to all.

Japanese Climbing.

WEST INDIA GHERKIN.—This is an oval variety, small in size. When grown to its full size it can be stewed with meat. In fact, this is the only use made of it about New Orleans.

ECC PLANT.

CULTURE.

The seed should be sown in hot-beds in the early part of January. When a couple of inches high they should be transplanted into another frame, so that the plants may become strong and robust. When warm enough generally during March, the plants can be planted in the open ground, about two and a half feet apart. This vegetable is very profitable in the south, and extensively cultivated.

NEW ORLEANS MARKET.—This is the market-gardeners' favorite and is almost exclusively grown here for the local market and for shipping purposes. It produces fruit of a large size, oval in shape and dark purple in color; also very productive. It is preferable to any other variety, as it stands our summer heat better and is always a sure cropper and a good shipper, as it seldom rots.

NEW YORK MARKET.—A fine sort for shipping. Plants of strong growth with large foliage and in rich soil, productive; the fruit is of large size with smooth and glossy deep purple skin. It is splendid for a general crop.

ENDIVE.

CULTURE.

A salad plant which is very popular and much cultivated for the market, principally for summer use. It can be sown in drills a foot apart, and when the plants are well up, thinned out till about eight inches apart. Or it can be sown broad-cast thinly and

New Orleans Market.

transplanted the same as lettuce. When the leaves are large enough, say about eight inches long, tie them up for blanching, to make them fit for the table. This can only be done in dry weather, otherwise the leaves are apt to rot. For summer use do not sow before the end of March, as if sown sooner, the plants will run into seed very early. Sow for a succession during the spring and summer months. For winter use sow in September and October.

GREEN CURLED.—Is the most desirable kind, as it stands more heat than the following sort, and is the favorite market variety.

BROADLEAVED BATAVIAN OR ESCAROLLE.—Used as a salad. This is grown quite extensively here of late for shipping, as it carries better than any other variety.

GARLIC.

This is a vegetable which is used to a great extent in the South, especially in Louisiana. It is used mostly by the foreign population, to flavor stews, roasts and various other dishes; also eaten by the Italians with bread and salt. In the past few years it has come into demand more than any other culinary ingredient. It grows splendidly here in our State and produces fine heads, and is largely cultivated, in spite of the fact that large quantities are imported here from

GARLIC.

Spain and Italy. It is cultivated like onions; should be planted in October and November in drills two to three feet and about six inches in the drill and about an inch deep. In the spring they are taken up and plaided together in a string by the tops. These strings are made to contain 50 heads and are then hung up in a dry airy place to cure, after which they are shipped to market.

KOHL-RABI, OR TURNIP ROOTED CABBAGE.

CULTURE.

This vegetable is very popular with the

European population of this city, and largely cultivated here. It is used for soups, or prepared in the same manner as Cauliflower. For late fall and winter use it should be sown from the end of July till the middle of October; for spring use, during January and February. When the young plants are one month old transplant them in rows one foot apart, and about the same distance in the rows. They also grow finely if sown broad-cast and thinned out.

EARLY WHITE VIENNA.—This is the finest variety grown for market and shipping purposes; it makes a large sized bulb or tuber and medium sized leaves and does not get stringy as quickly as other kinds; therefore is preferable. Can also be used to grow under glass or in hot-beds. If troubled with flies or lice use tobacco dust.

LEEK.

CULTURE.

Belongs to the onion family. Sow the seed and care for the young plants as for onions, but they need more room in order to develop fully. When the young plant is about the size of a goose quill, transplant to a prepared bed in rows one foot apart and four or five inches in the row. Set the roots deep, and draw the earth to them when cultivating, so that they may be well blanched by the time they are fit for use.

LONDON FLAG.—This is the variety generally cultivated in this country. It is hardy and of good quality.

Monstrous Carentan.

MONSTROUS CARENTAN.—The largest variety, often three inches in diameter, and becoming very white and tender. A hardy and desirable sort.

LARGE AMERICAN FLAG.—A variety which has become very popular with some market gardeners on account of its being larger than the London flag.

LARGE ROUEN.—Stem very large but comparatively short; the leaf is very broad, covered with whitish bloom. Stands a long time in condition for use.

LETTUCE.

There is no vegetable which is more universally used than this, and yet, comparatively few people ever eat really *good* lettuce, as that obtainable in the market is generally of the poorer but more show varieties, and so wilted as to be inferior to well grown heads of the better sorts, fresh and crisp from the garden. We earnestly urge all of our readers who can do so, to grow their own lettuce, and use some of the following varieties.

CULTURE.

Lettuce is sown here during the whole year by the market gardener. Of course it takes a great deal of labor to produce this vegetable during our hot summer months, and the following instructions should be followed:

Before sowing, soak the seeds for half an hour in water, take them out and put in a

piece of cloth and place in a cool spot—under the cistern, or if convenient in an ice box. Keep the cloth moist, and in two or three days the seeds will sprout. Then sow them. It is best to do so in the evening, and give a good watering.

The richer and better the ground the larger the head will be. No finer Lettuce is grown anywhere else than in New Orleans during fall and spring. The seed should be sown broad-cast, when large enough, planted out in rows a foot apart and from eight to ten inches apart in rows.

IMPROVED ROYAL CABBAGE.—This is a popular variety. Heads light green, of large size, and about two weeks later than the White Butter. It is very tender and crisp; can be sown later in the spring than the foregoing kind and does not run into seed so quickly.

SCHINDLER'S EARLY MARKET—This is one of the best varieties for an all season Lettuce; as it grows very quickly and produces large fine heads with a golden yellow heart and seldom goes to seed as other kinds do.

TROCADERO.—This is a beautiful light green Lettuce and forms large, solid, tender heads, with few outside leaves, which are inclined to curl. It is the leading variety planted by the market gardeners and truckers here for shipping in the winter and spring; it is also very hardy.

Schindler' Early Market

NEW ORLEANS IMPROVED PASSION.—

A strong growing sort with large green leaves, marked with scattered brown dashes. It forms a very solid head of rich, creamy yellow leaves, which are very thick, tender and of splendid quality. This sort is very hardy and is extensively grown in winter for shipping and early market use.

BIG BOSTON.—(Seed White.) A very popular variety with those gardeners who want a large heading, forcing sort, and also for outdoor winter culture. The plants are large, very hardy and vigorous, with broad, comparatively smooth, thin and very hard leaves which are bright, light green in color, and when well grown are quite tender. Indoors this forms a solid head, while outside it is less distinctively a heading sort. This is grown in the south as a winter lettuce.

PARIS WHITE COS, OR ROMAN—The Cos lettuce differs entirely in shape from the other varieties, the head being elongated and of conical form, eight or nine inches in height, and five or six inches in diameter. The outer coloring of this variety is yellowish green. To be had in perfection it requires to be tied up to insure bleaching. Used here extensively by the French and Italian population; splendid for table use.

EARLY WHITE BUTTERHEAD.—Plants medium sized, with numerous round, smooth leaves which are of a beautiful yellow color, and very sweet and tender. They form medium sized, fairly solid heads which, when prepared for the table, are exceedingly attractive in appearance.

BROWN DUTCH.—An old sort noted for its hardiness. Leaves large, thick, green, tinged with brown. It always forms a large, solid head which is somewhat coarse looking, but the inner leaves are beautifully blanched, exceedingly sweet, tender and well flavored.

Desirable because of its hardiness and fine quality.

MUSK MELONS.

CULTURE.

Cultivate as recommended for cucumbers, except that the hills should be six feet apart. Rich earth for the young plants is far better than manure, but if the latter must be used, see that it is well rotted and thoroughly mixed with the soil. If the plants grow very rank, more and finer fruit will be secured by pinching off the ends of the shoots when they are about three feet long. The quality of melons of all varieties is largely dependent upon conditions of growth and ripening. Unhealthy vines or unfavorable weather produces fruit of comparatively poor flavor.

ROCKY FORD.—This new musk melon is similar to the oval strain of *Netted Gem*. The strain here offered originated with the melon growers in the vicinity of Rocky Ford, Colorado, who have shipped this melon from that distant western point to eastern markets. The melons grown by them are so fine in quality as to outsell all others, and the demand for such melons has been far beyond the supply.

CHICAGO MARKET.—Fruit large, round or slightly oval with very shallow depressions and covered with dense netting. Flesh green, medium texture, very thick and sweet. The variety is an improvement on *Montreal* and will suit those who like a large, sweet, green-fleshed sort.

NETTED NUTMEG.—Small oval melon, roughly netted, very early and of fine flavor.

EARLY WHITE JAPAN.—Early sort of creamish white color, very sweet and of medium good variety for shipping.

OSAGE MUSK MELON.—Cultivated extensively for shipping North; it is of small size and smooth skin, but is very attractive and deliciously sweet. Splendid for family use.

NETTED CITRON.—This is a medium sized melon, round in shape and roughly netted. Very sweet and musky in flavor.

EMERALD GEM MELON.—The *Emerald Gem* is entirely unlike any other musk melon yet introduced. The melons are about the size of the *Netted Gem*, but, unlike that variety, the skin, while ribbed, is perfectly smooth, and of a very deep emerald green color. The flesh, which is thicker than any other native melon of the same size, is of a suffused salmon color, and ripens thoroughly to the thin green rind, which is distinctly

defined. The flesh is peculiarly crystalline in appearance, and so very juicy, sweet and rich that it almost drops to pieces. It matures very early, and is quite productive.

NEW ORLEANS MARKET.—One of the best melons that can be grown in the South for shipping as well as family use. Of extra large size, sometimes averaging 16 pounds;

hills about eight feet apart, by thoroughly working into the soil an abundance of well rotted manure, and in this plant the seed as soon as the ground becomes warm and dry. Frequent watering of the young plants with liquid manure will hasten their growth and help them get out of the way of insect pests.

GEORGIA RATTLESNAKE.—One of the

New Orleans Market.

very sweet and of high flavor. It is roughly netted and of greyish green color; grown here extensively for this market; in fact the only melon raised in this section.

WATER MELONS.

CULTURE.

In order to get good Water Melons it is essential that the plants get a good start, and to this end it is important to prepare

oldest and most popular sorts, particularly in the South. Fruit cylindrical, square at the ends, smooth, distinctly striped and mottled light and dark green. Flesh bright scarlet and very sweet.

KOLB'S GEM.—Vines of medium size, but remarkably vigorous and healthy. Leaves of medium size, deeply cut with a peculiar frilled edge. Fruit of the largest size, round

Dixie.

or slightly oval, marked with irregular mottled stripes of dark and light green. Outer rind or shell exceedingly hard and firm, making it a good sort for shipping long distances. Flesh bright red, solid, a little coarse, but sweet and tender.

DIXIE.—A popular market sort. Vine vigorous, large growing and hardy; fruit medium sized to large, about one-third longer than thick. Color of skin dark green, striped with a lighter shade; rind thin but tough; flesh bright scarlet, ripens closely to the rind, is of the best quality and free from the hard, coarse center which is so objectionable a feature of many shipping melons.

ICE CREAM.—The old but extremely popular home market melon. There is none better, nor a more handsome melon grown. It is medium in size, almost round; the skin a pale green, slightly mottled; flesh bright scarlet, fine-grained, solid to the center, sweet, crisp and melting. Its delicious flavor entitles it to the name.

SWEET HEART WATER MELON.—This new melon is early, large, handsome, heavy and productive. The shape is oval, and color mottled light to very light green. Flesh bright red, solid, but tender and very sweet. We have a very fine stock grown from selected stock seed procured from the originator, hence it is as pure and true as the original.

FLORIDA FAVORITE.—A very large, long melon, mottled dark green, with stripes of lighter shade. Rind thin but firm; flesh very bright, deep red; very sweet, tender and excellent. A very popular variety in the South.

McIVER'S WONDERFUL SUGAR MELON.—The sweetest melon grown. Without a single exception this is the sweetest water melon of all. The melons attain a great weight, are of a very handsome appearance, never crack or lose their fine flavor in the wettest season. It is a very productive and hardy variety, and one that will take the lead wherever known.

LONE STAR WATER MELON.—This is one of the finest varieties of water melon ever introduced and cannot be excelled for its fine quality in solidity, crispness and sweetness. It is long and uniform in shape, rind light green in color, marked with dark mottled stripes. One of the best for market as well as family use.

MUSTARD.

CULTURE.

This is grown to quite an extent in the Southern States, and is sown broadcast during fall, winter and spring. It may be used the same as Spinach, or boiled with meat as greens. The White or Yellow Seeded is very little cultivated, and is used chiefly for medicinal purposes, or pickling. The large-leaved

TRIUMPH.—A southern variety which has become very popular with shippers. The fruit is uniformly large, nearly round, dark green, indistinctly striped with a lighter shade; rind thin and firm, making it an excellent shipper; flesh bright red and of good quality.

or Curled has black seed, a distinct kind from the Northern or European variety. The seed is raised in Louisiana. It makes very large leaves; cultivated more and more every year.

LARGE-LEAVED CURLED.—This is the favorite kind here, sown largely for the mar-

ket. Leaves are pale green, large and curled or scalloped on the edges.

CHINESE VERY LARGE CABBAGE-LEAVED.—This is a European variety, with light green very large leaves. It has not the same taste as the large-leaved or the large curled, but will stand longer before going to seed.

NASTURTIUM. CULTURE.

Sow early in spring in drills one inch deep or, if for ornament, in boxes near a trellis, fence or some other support to climb upon. They thrive very well in any kind of soil.

TALL NASTURTIUM.—This is cultivated a great deal here in the South for its foliage and beautiful flowers, but is also grown for its berry like seeds, which are gathered when green and put in vinegar and are then called capers, which are frequently used here for seasoning and flavoring stews and meats.

DWARF NASTURTIUM.—Same as above, but dwarf in growth and used mostly for ornament.

OKRA.

This is one of the most popular vegetables grown in the South and is being cultivated on a larger scale every year. It is used in making the celebrated dish known as Creole Gumbo. It is also boiled in salt water and, when cooled off, mixed with vinegar, sweet oil and other seasoning and served as a salad. It is wholesome and nutritious, also a healthy vegetable for the stomach.

Early French Market.

CULTURE.

Should be planted early in spring or as soon as the ground is warm, as, if sown too early, the seed will rot. Sow in drills two to three feet apart, and when the plants are up, thin out, leaving one or two plants every twelve or fifteen inches in the row.

TALL GROWING.—This is a good variety for the market, but since the dwarf sorts have been introduced it is not being cultivated to any large extent.

EARLY FRENCH MARKET.—This is one of the best sorts for market as well as for family use, and is almost exclusively used here by truckers and market gardeners. It is of a half dwarf growth and very prolific; the pods are of a light green color, seldom ribbed, and remain tender much longer than any other kind.

WHITE VELVET.—This is a white Okra, dwarf, with long, round, smooth pods, free from ridges. Fine for family use.

ONIONS. CULTURE.

In Onion culture, thorough preparation of the soil, careful sowing and the best of culture, though essential for a good yield, will avail nothing unless seed of the best quality is used. With the same care and conditions, Creole onion seeds grown in two different sections may be so unequal in quantity of good, merchantable onions that it is more profitable to sow only the purest and best stocks. Our seed is grown by a reliable grower on Bayou Lafourche, and only the choicest bulbs are set out for the growing of our seed. We do not depend on chance purchases, as some houses do; as many times some unscrupulous trucker will cut seed from shot-up onions which are utterly unfit to grow merchantable stock for the market. The onion crop is one of the leading vegetables planted for our market, for shipping as well as home use. Thousands of barrels are grown in the State of Louisiana and are shipped to the leading cities in the United States in the spring and early summer. The only and best keeping sort for our section and other neighboring States is the Creole Onion. Under favorable circumstances—that is, if our spring season is not too wet—the Red and White Bermuda seed (Teneriffe grown) will make a fine onion, but not as good a keeper as the Creole, and is much milder in flavor. The proper time to sow the seed is after the 15th of September. It can also be sown in January and February, thinly in drills.

CREOLE, OR LOUISIANA.—This variety is of brownish red color and very solid; it is of fine flavor and half round in shape. It is a longer keeper than any Northern or Western sort and seldom gets soft.

RED BERMUDA.—(Tenneriffe grown.) This is a splendid sort for early shipping and for bunching for market. Red in color and flat in shape; grow to very large size in rich soil. Fine for family use.

Truck Farmers write to us for special prices on large quantities.

WHITE BERMUDA.—(Teneriffe grown.) Same as the Red variety, but pure white in color and mild in flavor.

WHITE QUEEN.—(Italian.) This is of medium size, very early and flat in shape; can be sown as late as February and still good-sized bulbs will be had. It is mild in flavor and is splendid when boiled and served with white sauce for table.

SHALLOTS.

A species of small onions which is used in its green state for flavoring soups, stews, salads, etc. It grows in clumps, which are divided and set out in the fall of the year and early spring in rows a foot apart and about six inches in the rows. Latter part of spring, when the tops are dry, they are taken up, thoroughly dried and spread out thinly in a dry, airy place.

ONION SETS.

Onion Sets, when planted in January and February here in the South, will most always produce fine large bulbs. They should be set out in rows five to six inches apart and about eight or ten inches in the rows.

RED WESTERN SETS.—Will produce a fairly good onion, but are planted mostly for use in the South as green onions. They

do very well in North Louisiana and Mississippi.

CREOLE SETS.—These are the best for this section and will produce good sized bulbs under favorable conditions, and make good, solid onions and long keepers.

YELLOW WESTERN SETS.—Same as the red sets, only different in color, which is of a pale yellow or brown.

WHITE WESTERN SETS.—A fine variety of same quality as the red and yellow sets, but are not as hardy and do not keep as well.

PARSNIP.

The value of the Parsnip as a culinary vegetable is well known, but is not generally appreciated at its full value for stock feeding. On favorable soil it yields an immense crop of roots, which are more nutritious than carrots or turnips, and particularly valuable for dairy stock.

CULTURE.

They do best on a deep, rich, sandy soil, but will make good roots on any soil which is deep, mellow and moderately rich. Fresh manure is apt to make the roots coarse and ill-shaped. As the seed is sometimes slow to germinate, it should be sown as early as possible, in drills two feet to two and one-half feet apart; cover one-half inch deep and press the soil firmly over the seed. Give frequent cultivation, and thin the plants to five or six to the foot.

HOLLOW CROWN, OR GUERNSEY.—Root white, very tender, with a smooth, clean skin. The variety is easily distinguished by the leaves growing from a depression on the top or crown of the root.

PARSLEY.

CULTURE.

Sow in the fall from August to November and in the spring from January to May. It is generally sown broad-cast. Used a great deal for seasoning and ornamenting fancy dishes.

PLAIN PARSLEY.—This is the only variety grown for the New Orleans market; as it grows tall and makes very dark colored leaves; is also stronger in flavor and harder than the other varieties.

CHAMPION MOSS CURLED.—A compact growing, finely cut and thickly curled sort of a bright green color. Very ornamental for decorating fancy dishes. It is grown here very extensively, lately for shipping to the northern and eastern markets during winter and early spring.

PEAS. CULTURE.

For early Peas the ground should be light and well manured the year previous; as fresh manure will produce a rank growth of vines and they will make only a small and uneven crop, at the same time a poor quality of peas. Late Peas, such as the Marrowfats, can be successfully grown in a moderately heavy soil; as, if sown in too rich ground, they will not bear much of a crop. The early varieties can be planted in the months of August, September and October and during January, February and March. The Marrowfats should be sown in November, December and January for a late crop, as they stand more cold, also bearing longer than the early kind.

SCHINDLER'S EXTRA EARLY.—This is the earliest and best of all the extra early kinds. It has held the lead for many years on the New Orleans market, and is yet the best variety for gardeners. It is very prolific and ripens so uniformly that the vines can be cleaned up at one picking. This is a desirable feature, as the gardener can sell his entire crop on a top market. It is the best early variety for all-round purposes.

EARLY WASHINGTON, EARLY MAY, OR FRAME, which are nearly all the same thing, are about ten days later than the Extra Early. It is very productive, and keeps longer in bearing than the foregoing kind. Pods a little smaller. Very popular about New Orleans.

EARLY ALASKA.—By careful selection and growing we have developed stock of this smooth, blue pea, of unequalled evenness of growth of vine and early maturity of pods. Vines two to two and one-half feet high, bearing four to seven long pods, which are filled with medium sized, bright green peas of excellent flavor. Ripe peas small, bluish green. Matures all the crop at once and is an invaluable variety for market gardeners and canners.

BLUE BEAUTY.—A blue round pea. Height, one and one-half feet. Quality and flavor good.

EXTRA EARLY PREMIUM GEM.—Seed wrinkled. Vines, 14 to 18 inches high, extra early in season; quality very choice; the most productive of the very dwarf varieties; excellent for market.

AMERICAN WONDER.—A variety nearly as early as the First and Best, with stout, branching vines about nine inches high, and

covered with well-filled pods containing seven or eight large exceedingly sweet, tender and well flavored peas. Dry peas medium sized, much wrinkled; pale green. We have taken great pains in growing our stock and know it to be much better than that usually offered.

LARGE WHITE MARROWFAT.—Cultivated very extensively for the summer crop. Vines about five feet high and of strong growth. Pods large, cylindrical, rough, light colored and well filled; seeds large, smooth, round and yellow or white, according to the soil in which they are grown. It is excellent for summer use, but inferior in quality to most of the newer sorts, although undoubtedly one of the most productive of the garden varieties.

BLACK-EYED MARROWFAT.—An excellent variety, growing about five feet high; pods large; a prolific bearer and can be recommended as one of the best Marrowfat sorts. Very hardy.

IMPROVED STRATAGEM.—Most stocks of the large podded, semi-dwarf, English varieties of peas have been so wanting in uniformity and evenness of type as to disgust American planters, but by constant effort we have developed a stock of this, the best variety of that class, which comes true, and we do not hesitate to pronounce it one of the best of the large podded sorts. The pods are of immense size and uniformly filled with very large, dark green peas of the finest quality. One of the very best varieties for market gardeners and family use.

FIELD, OR COW PEAS.—Used very extensively here in the South for fertilizing, as well as for making hay for winter feed. It is splendid for fattening hogs, and when the pods are dry and threshed the peas make a splendid feed for poultry. They should be sown from April till July broadcast; if to be used as a fertilizer. The vines should be plowed under when about two to three feet long. Clay Peas and Whippoorwills are the leading kinds used.

PEPPERS. CULTURE.

To raise pepper plants successfully and to have them early for market, the seed should be sown in a hot-bed during January, and as soon as the weather moderates and the plants are large enough they should be transplanted into the open ground in rows from 18 to 24 inches apart and about 15 inches in the rows. Never sow sweet peppers in

close proximity to the hot varieties; as they will mix readily.

SWEET SPANISH MONSTROUS.—This variety is almost exclusively planted by the market gardeners here for our market and for shipping. It is very mild, of a beautiful green color, of large size, tapering towards the end. Superior to any other kinds for salads or stuffed.

RUBY KING.—A sweet pepper which grows to a very large size; produces fruit from five to six inches long and about four inches in diameter. Is mild in flavor and can be used as a salad same as Sweet Spanish.

GOLDEN DAWN OR MANGO.—Of a beautiful golden yellow color, very attractive, mild and sweet; in shape it resembles the Bull Nose. Fine for family use.

LONG RED CAYENNE.—This is a long narrow sort, tapered and inclined to curve;

it is very hot and used a great deal in the South for seasoning and making pepper sauces.

BIRDEYE.—A very hot and prolific sort; also attractive and ornamental; the fruit does not get any larger than a small pea and is of a deep red color. Is fine for putting up in bottles with vinegar and used for seasoning purposes.

TABASCO.—(Genuine.) Grown extensively for making the well known Tabasco pepper sauce; in fact it is almost the only kind raised for that purpose; it is the hottest variety of the pepper family. It is very prolific, as it produces bushes three to four feet high, which are literally covered with fruit which is about three-quarters to an inch in length and narrow. They are easily gathered, as the peppers do not adhere to the stem, which is quite an advantage over the other kinds.

Long Red Cayenne Pepper.

Early Triumph.

POTATOES.

We make a specialty in handling only the best varieties of *Seed Potatoes* and only offer such kinds which are best adapted to our climate and have been proven by careful tests to be the best producers for this market.

The early varieties produce best in light, dry, rich, sandy soil; the best fertilizers, is well rotted stable manure, cotton seed meal or super-phosphates will also answer very well. Always select good size and medium potatoes for Spring planting; cut each tuber to two or three eyes to each piece; plant in drills about three feet apart in order to cultivate them properly. In planting them in gardens, two feet apart is sufficient. The proper time to plant potatoes is from middle December

till latter part of March; the best time for a general crop, is to plant from latter part of January to end of February. Potatoes can be also grown successfully here in the South for a Fall crop; the tubers should be planted during August and September. The seed must be planted whole; as if cut, the potatoes are apt to rot; therefore all the small potatoes or cullings should be used from the Spring crop for seed stock.

The best potatoes for this section and vicinity are the Boston Peerless, Early Rose and Early Triumph. The latter do well on Piney Wood land; if fertilizers are properly used. We carry the following varieties in stock and consider them the best sorts to plant in the Southern States for earliness and productiveness for the market and family use.

BOSTON PEERLESS.— One of the leading kinds for our market and is almost exclusively planted by the gardeners and truckers in this vicinity.

EARLY ROSE.—The earliest and best potato for family use and for shipping to distant markets. It is quite productive and does well on light, rich soil. The potato has a light pink skin; is oval and long, flesh pure white and very mealy when boiled.

EARLY TRIUMPH.—This variety has become very popular and is extensively grown; on light, sandy soil and piney wood land, where it produces prolific crops of good sized tubers. It is of a fine round shape, light red color, flesh pure white and excellent for table use. Our stock of seed is genuine second crop Tennessee grown. None better to be had.

PUMPKINS.

CULTURE.

Pumpkins can be grown in almost any kind of soil; of course the richer the ground the larger fruit they will produce. They should be planted in hills 10 to 12 feet apart and cultivated same as melons or cucumbers.

LARGE CHEESE, OR FIELD.—Most popular sort for field and market use; splendid for feeding cattle. It is of large, round, flat shape, salmon-yellow in color, solid and a long keeper. Used to quite an extent in the South for table use.

CASHAW CROOK-NECK.— (Green-striped.) This is the leading variety planted for the New Orleans market. It is of a greenish-yellow color with deep green stripes; flesh is fine grained, yellow and sweet. Best kind for table use.

RADISH.

CULTURE.

Radishes are grown here for our markets all the year around on an extensive scale. The ground should be well prepared (rich and mellow; the early varieties can be sown broad-cast, amongst other crops, as Spinach, Carrots, Lettuce, Beets and Peas. During the summer months, in order to have the radishes to mature quickly and be brittle, they have to be watered frequently. The leading varieties used here are the Half-Long Scarlet French, Long Brightest Scarlet and White Strasburg. During the winter the Early Scarlet Turnip White-Tipped is sown largely for shipping to the Northern markets.

EARLY SCARLET TURNIP.— (White-Tipped.) One of the handsomest of the turnip radishes and a great favorite in many large markets for early planting outdoors. It is but little later than the White-Tipped, Forcing, and will give entire satisfaction where extreme earliness and small top are not the primary objects. Roots slightly flattened on the under side; color very deep scarlet with a white tip; flesh white and of the best quality.

LONG BRIGHTEST SCARLET, WHITE-TIPPED.—This is the brightest and handsomest colored, scarlet radish known, and a decided improvement in earliness and color over other varieties of this class. It makes roots fit for use in about twenty-five days from time of planting, and they continue in good condition until they are full grown, when they are as large as the Wood's Early

Frame. It has a small top, and does not run to neck.

very bright red in color. The flesh is white and crisp.

Half Long Deep Scarlet.

HALF LONG DEEP SCARLET.—The roots of this hardy and desirable variety are of a very brilliant, deep, rich red color, and half long with a somewhat tapering point; the flesh is very white, crisp and tender, and holds its juiciness well, not becoming pithy till overgrown.

EARLY LONG SCARLET, SHORT TOP IMPROVED.—This small topped sort is about six inches long, grows half out of the ground, and is a standard and excellent sort either for private gardens or market use. It continues brittle and tender until July. The roots are very uniform in shape, smooth, and

Long Black Spanish.

CHARTIER.—This radish is quite distinct in appearance from any other variety; it is long like the Long Scarlet; the color at the top is crimson, running into pink about the

RADISHES

Truck Farmers write to us for special prices on large quantities.

middle; the balance of the root downward is pure white. It will grow to a large size before it becomes pithy.

WHITE STRASBURG.—This grows to the largest size and is usable when quite small, thus covering a long season. The mature roots are four to five inches long and about two inches thick, very white; the flesh is exceedingly crisp and tender. One of the best of the large summer variety.

YELLOW SUMMER, TURNIP ROOTED.—Very symmetrical and uniform; nearly round, with grayish-white skin, covered with a bright yellow russeting, which makes it very attractive. The flesh is compact, white and rather pungent.

LONG WHITE VIENNA, OR LADY FINGER.—A very excellent white variety with long, very smooth, white roots, which are crisp and tender; it is one of the most desirable of the white, summer sorts.

LONG BLACK SPANISH.—One of the latest as well as the hardest of radishes; an excellent sort for winter use. Roots oblong, black; of very large size and firm texture.

SALSIFY, OR VEGETABLE OYSTER.

The long, white, tapering root of Salsify resembles a small parsnip, and when cooked is a good substitute for oysters, having a very similar flavor. It is fine when grated and made into batter cakes.

CULTURE.

It succeeds best in a light, well enriched soil, which should be spaded or plowed very deep. It should be sown during the beginning of September, not later than December. Sow in drills about 8 to 10 inches apart, and thin out 3 to 4 inches in the rows.

MAMMOTH SANDWICH ISLAND.—This is the only kind planted here, as it is superior to the common variety, being larger, growing stronger and not liable to branch.

SORREL.

CULTURE.

This is a vegetable which will grow almost in any kind of soil, rich or barren, and will last for three or four years. It is used mostly for soups and salads; also cooked like Spinach.

LARGE LEAVED FRENCH.—The best garden variety; produces large, pale green leaves of fine quality.

SPINACH.

Spinach is very hardy, extremely wholesome and palatable and makes a delicious

dish of greens, retaining its bright green color after cooking. It is also pronounced one of the healthiest vegetables grown.

CULTURE.

Plant in very rich ground; the richer, the larger the leaves. Sow during the fall from September until March, broad-cast or in drills one foot apart.

Broad-Leaved Flanders.

BROAD-LEAVED FLANDERS.—One of the most vigorous and strong growing varieties. The leaves are nearly round, uniformly bright green, quite thick and slightly crimped in the center. One of the best sorts for our market and for shipping.

LARGE-LEAVED SAVOY.—This is an early variety; produces narrow pointed leaves, curled like those of the Savoy cabbage; only good for family use; goes to seed quickly in spring.

SQUASH.

The squash is one of the most nutritious and valuable of all our garden vegetables. Few farmers recognize the value of winter squashes for feeding stock. An acre of squashes, costing no more than acre of corn to cultivate and easier gathered, will give as much food available for feeding stock as corn will.

CULTURE.

For first and early crop the seed of squash should be planted in boxes beginning of February, but the best time is to sow them when the ground gets warm and danger of frost is over. Sow during March for a general crop in hills from three to four feet apart, 6 to 8 seeds in a hill; when well up thin out to three or four of the strongest plants.

Early White Bush, or Patty Pan.

EARLY WHITE BUSH OR PATTY PAN.—This is a beautiful clear white variety, uni-

form in shape, well scalloped, and is superior to any other kind for market.

YELLOW SUMMER CROOK-NECK.—This is a strong growing variety, very early and productive. Fruit measures from 10 to 15 inches in length, with crooked neck and covered with wart-like excrescences; of bright

yellow color and very tender.

HUBBARD.—This is one of the best winter squashes; flesh of bright orange yellow, fine-grained, very dry, sweet and rich flavored; keeps perfectly throughout the winter and can be used for baking like sweet potatoes; it is splendid for feeding stock.

Improved Trophy.

TOMATOES. CULTURE.

Tomatoes do best on light, warm and not over-rich soil; success depends upon securing a rapid, vigorous and unchecked growth during the early part of the season. Sow the seed in January, in hot-beds or in flat boxes placed near a window in a warm room. When the plants are from 3 to 4 inches high they should be transplanted into another hot-bed in order to make them strong and sturdy. When the danger of frosts is over, which is about the middle of March, they should be transplanted into the open ground in rows 3 to 4 feet apart. They should always be supported by stakes or wire supports, as, if allowed to grow wild, the

fruit at the bottom of the vine is apt to rot. In March the seed can be sown in the open ground for a general crop. For a late fall crop the seed should be sown from May to August.

FAVORITE.—This is one of the leading kinds for our market; it is solid, uniform in shape and of a beautiful rich, dark red color; it is also exceedingly smooth; flesh very firm. Market gardeners' favorite.

STONE.—This is the heaviest and most solid fruited of the large tomatoes of good quality. Our stock is superior to any offered under that name, being more uniform, better colored and larger. Vigorous and productive vines; fruit round, apple-shaped, very large, deep red in color and solid.

Stone.

Favor.te.

BEAUTY.—We have been selecting this to a larger, smoother fruit than the original stock, and think we have made it the smoothest and best of the large purple sorts. Vines large, vigorous and heavy bearers; fruit large, uniform in size, very smooth; color of skin purplish-pink; flesh light pink and of excellent flavor.

ACME.—We have given a good deal of attention to the improvement of this variety, and think we have succeeded in making it one of the smoothest and most uniform, medium sized, early, purple fruited sorts. Vines large, hardy, and productive, ripening its first fruit almost as early as any, and continuing to bear abundantly until cut off by frost. Fruit in clusters of four or five, invariably round, smooth and of good size, free from cracks and stands shipment remarkably well; flesh solid and of excellent flavor. For market gardeners who want an

early, purple fruited tomato, either for home market or to ship, for private gardens or for canners, it is one of the best. This variety is used for planting under glass.

IMPROVED TROPHY.—The Trophy was the first of the modern improved sorts, and it had qualities of color, size and solidity which entitled it to hold a place against the much lauded new kinds; though all admitted it lacked in smoothness and regularity. By most careful breeding and selection, there has been produced a strain in which all the original good qualities are retained and even more highly developed, yet it compares favorably with any in smoothness, regularity and symmetry of the fruit. We offer our Improved Trophy as a sort whose large, strong growing, vigorous and productive vine, very large, very solid, smooth, fine flavored, and beautiful, deep, rich red fruit will satisfy the most exacting.

Dwarf Champion

Beauty.

DWARF CHAMPION.—This is a purple fruited variety, which forms very stout, strong plants about two feet high. The branches are short, making a bushy plant that stands quite erect without stake. This sort is often sold as Tree Tomato. Fruit smooth, medium sized, color purplish-pink, fairly solid, but has no hard core, and is of good flavor. About as early as any purple fruited tomato, and is quite popular in some localities, both for market and home use. The dwarf habit of the vines makes it very desirable for forcing, as it can be planted closer to the glass, and more closely on the bench than the tall growing kinds. Our stock is a very superior strain with larger, smoother fruit than the original.

PERFECTION.—This is one of the handsomest tomatoes grown, and all who have tried its invariably large, round, smooth, handsome, red fruit pronounce it of the highest quality. It has been used very satisfactorily for forcing under glass.

TURNIPS.

CULTURE.

Sow in June till November in drills 16 inches apart or broad-cast and covered lightly, in new ground or in land that has been manured and worked in the year previous. If the ground has been used for other crops

Extra Early Purple Top Milan. for some time, the land should be sprinkled with land plaster and well worked to incorporate same. For a late spring crop they

should be sown in January, February and March; when they will do very well for summer use. *Ruta Bagas* should be sown in drills or ridges, from middle of July to middle of September.

EXTRA EARLY PURPLE TOP MILAN.—The earliest turnip in cultivation—about two weeks earlier than purple top strap-leaved. The root is flat, of medium size, quite smooth with a purple top. Flesh white, hard and of fine quality.

EARLY WHITE SPRING.—An early white variety; something similar to the Early White Flat Dutch Turnip, not so large, but of fine quality; best kind to be sown for early Spring crop.

EARLY PURPLE TOP (Strap-leaved).—This is an early variety and a great favorite with market gardeners here for an early crop; it is also a fine variety for family use. It is flat in shape, like a broad disc and grows to a good size and very large in rich soil. It is pure white, with a purple or dark red collar, fine grained, white fleshed and sweet; very tender. Leaves few and upright in growth; splendid for table use.

EARLY WHITE FLAT DUTCH (Strap-leaved).—This is an early kind and is largely planted for the earliest market variety; is similar in shape to the *Purple Top Flat* and also has its good qualities, but is pure white and does not sell well on the market, when the *Purple Top* sorts come in.

PURPLE TOP GLOBE.—This is the leading Turnip for the New Orleans market, for a general crop and is grown extensively by the truckers here. It is of same shape as the *White Globe*, but has a purple or dark red collar and is beautiful in appearance, of most excellent quality, a strong grower and very hardy. It is a splendid table sort; in fact, none better to be had, as it keeps longer than any other kind, as it does not become spongy as quick as the other sorts.

POMERANEAN WHITE GLOBE.—This is one of the most productive kinds and in good, rich soil roots will frequently grow to twelve pounds in weight. It is of perfect globe shape, pure white and smooth. Splendid for table as well as for stock food.

WHITE EGG.—A quick-growing sort, very early, egg or oval shaped; pure white, with small top. Flesh very sweet, firm and mild.

COW HORN.—Is pure white in color, long in shape like a carrot; but crooked; it is in-

clined to grow half out of the ground. It is of rapid growth, well flavored and is fine for table use as well as for stock food.

WHITE HANOVER.—This variety resembles the *Ruta Baga* in shape and partakes of its nature. The flesh is white, hard, firm and sweet; is a long keeper; fine for table use and is especially recommended for feeding cattle during winter and early Spring.

LARGE AMBER GLOBE.—One of the best yellow varieties for a field crop for stock or for table use. Flesh yellow, fine grained and sweet; color of skin yellow, top green. It is hardy and a good keeper; should be planted more for stock food.

YELLOW GLOBE.—Almost similar to the above and the roots do not get quite as large; but more globular in shape.

GOLDEN BALL.—Undoubtedly the most delicate and sweetest yellow-fleshed turnips introduced. It is of medium size; firm, hard and of excellent flavor. One of the best yellow varieties for table use. A good keeper.

IMPROVED PURPLE TOP RUTA BAGA (Long Island Grown).—This is one of the best varieties of *Ruta Baga* ever introduced; it is very hardy and productive and has very little neck. Uniform in shape, few side roots; flesh yellow, of solid texture, sweet and well flavored; shape slightly oblong, terminating abruptly; color deep purple above and bright yellow under the ground. Leaves small and light green.

SEVEN TOP.—This variety is grown mostly in North Louisiana and parts of Mississippi, for the tops, which are used for greens. It is very hardy and grows all winter, but does not produce any eatable roots. Can be used like Spinach or Mustard.

PURPLE TOP YELLOW ABERDEEN.—Produces roots of medium size, round in shape, flesh pale yellow, tender and approaches the *Ruta Baga* in hardness and texture; it is very productive.

TOBACCO SEED

HAVANA TOBACCO (Imported).—We have the genuine strain of the celebrated *Vuelto Abajo* variety, the leaf of which is only used for the manufacture of the finest cigars in the world. None better to be had. Price, 30 cents per oz.; \$4.00 per pound.

CONNECTICUT SEED LEAF.—One of the best American sorts for making cigar wrappers and for pipe smoking. Price 20 cents per oz.; \$2.50 per lb.

AROMATIC, MEDICINAL AND POT HERBS.

GENERAL CULTURAL DIRECTIONS.

Most of the varieties thrive best on sandy soil, and some are stronger and better flavored when grown on that which is rather poor, but in all cases the soil should be carefully prepared and well cultivated, as the young plants are for the most part delicate and easily choked out by weeds. Sow in drills sixteen to eighteen inches apart, taking pains that the soil is fine and pressed firmly over the seed. Seeds should be sown early in spring; such varieties as Sage, Rosemary, Lavender and Basil are best sown in a frame and then transplanted into the garden. Most of them should be cut when in bloom, wilted in the sun and thoroughly dried in the shade.

ANISE (*Pimpinella anisum*).—A well-known annual herb whose seeds, which have an agreeable, aromatic odor and taste, are used for dyspepsia and colic, and as a corrective of griping and unpleasant medicines. Sow early and thin to six to ten plants to foot of row.

BALM (*Melissa officinalis*).—A perennial herb, easily propagated by division of the root or from seed. The leaves have a fragrant odor, similar to lemons, and are used for making balm tea for use in fevers, and a pleasant beverage called balm wine.

BASIL, SWEET (*Ocimum basilicum*).—A hardy annual from the East Indies. The seed and stems have the flavor of cloves, and are used for flavoring soups and sauces.

BORAGE (*Borago officinalis*).—A hardy annual used as a pot herb and for bee pasturage. The leaves immersed in water give it an agreeable taste and flavor. Sow in beds and thin to six to ten inches apart. In some places this sows itself and becomes a weed.

CARAWAY. (*Carum carui*).—Cultivated for its seed, which is used in confectionery, cakes, etc. The leaves are sometimes used in soups. If sown early in August the plants will give a fair crop of seed the next season, but when sown in the spring, will not seed until the next year. Plant in drills two or three feet apart, and thin out if necessary.

Our 25c. Collection.

We will mail you 10 packets of the following choice vegetable seeds, free of postage:

Golden Self Blanching Celery,
St. Valery Carrot,
Early Eclipse Beet,
New Orleans Market Cucumber Seed,
New Orleans Market Egg-Plant,
Schindler's Imp. Market Lettuce,

New Orleans Market Musk Melon,
Ey. Bush or Patty Pan Squash,
Favorite Tomato.

For 50c. we will mail you 20 packets as follows:

Early Eclipse Beet,
Charleston Wakefield Cabbage,
gt. Valery Carrot,

DILL (*Anethum graveolens*).—An annual grown for its seeds, as well as for the greens as they both have a strong aromatic odor and a warm, pungent taste. The seed is good for flatulence and colic in infants and the greens are excellent for flavoring pickles.

FENNEL (Sweet Florence; *Foeniculum officinalis*).—This is grown extensively here by the Italian gardeners for the market, and is also called *Italian celery*. It is used for soups, fish sauces and salads; is also eaten like celery dipped in salt. The seeds are also used for flavoring.

LAVENDER (*Lavendula vera*).—Hardy perennial, growing about two feet high. Used for the distillation of lavender water, or dried and used to perfume linen. Pick before it becomes dry and hard and dry quickly, so it will retain its odor.

MARJORAM; Sweet (*Origanum marjorana*).—A perennial, the young tender tops being used green for flavoring or they may be dried and used for winter for flavoring meats, sausage, etc.

ROSEMARY (*Rosmarinus officinalis*).—Hardy perennial with fragrant odor and warm, aromatic, bitter taste.

RUE (*Ruta graveolens*).—A hardy perennial with a peculiar smell. The leaves are bitter, and so acrid as to blister the skin. It is a stimulant and anti-spasmodic, but must be used with great caution, as its use sometimes results in serious injury. It must not be suffered to run to seed, and does best on poor soil.

SAGE (*Salvia officinalis*).—A hardy perennial possessing some medicinal properties, but cultivated principally for use as a condiment; it being used more extensively than any other herb for flavoring and dressing. Sow early in spring (four to five pounds per acre in drills) on very rich ground, cultivate often and thin the plants to sixteen inches apart. Cut the leaves and tender shoots just as the plant is coming into flower and dry quickly in the shade. The plants will survive the winter, and may be divided. If this is done they will give a second crop superior in quality.

SUMMER SAVORY (*Satureia hortensis*).—A hardy annual, the dried stems, leaves and flowers of which are extensively used for flavoring, particularly in dressings and soups. Culture the same as that of Sweet Marjoram.

THYME (*Thymus vulgaris*).—This herb is perennial, and is both a medicinal and culinary plant. The young leaves and tops are used for soups, dressing and sauce; a tea is made from the leaves which in some cases will relieve nervous headache. Sow as early as the ground will permit.

GRASS SEEDS.

RED TOP (*Agrostis vulgaris*).—In Pennsylvania and states further south, this is known as *Herb's Grass*, a name applied in New England and New York to Timothy. It is a good, permanent grass, standing our climate well, and makes good pasture when fed close. When sown alone, use about twenty-

eight pounds of seed per acre. Sow in spring or fall.

ORCHARD GRASS (*Dactylis glomerata*).—One of the most valuable grasses on account of its quick growth and valuable aftermath. It has a tendency to grow in tufts, and does better if sown with clover, and as it ripens at the same time as clover, the mixed hay is of the best quality. When sown alone, about twenty-eight pounds are required per acre; if sown with clover, half that quantity. It is perennial, and will last for years, but its habit of growth unfits it for lawns.

KENTUCKY BLUE GRASS, Fancy Clean (*Poa pratensis*).—Sometimes called June grass, but the true June or Wire Grass is much inferior. Kentucky Blue Grass is the most nutritious, hardy and valuable of all northern grasses. In conjunction with White Clover it forms a splendid lawn; for this purpose use not less than 54 lbs. of Blue Grass and six pounds of White Clover per acre. If sown by itself for meadow or pasturage about twenty-eight pounds per acre will be required. Sow early in the spring, or in October or November.

TIMOTHY (*Phleum pratense*).—This is the most valuable of all the grasses for hay, especially in the North. Thrives best on moist, leamy soils of medium tenacity. It should be cut just when the blossom falls. Sow early in the spring or fall, at the rate of twelve pounds per acre, if alone, but less if mixed with other grasses.

ENGLISH OR PERENNIAL RYE GRASS (*Lolium perenne*).—A very valuable variety for permanent pasture. Succeeds well on almost any soil, but is particularly adapted to moderately moist or irrigated lands. Sow thirty to forty pounds per acre, in spring.

MEADOW FESCUE, OR ENGLISH BLUE GRASS (*Festuca pratensis*).—A perennial grass from two to four feet high, with flat, broad leaves. This is one of the standard European grasses. It needs rich ground, and succeeds well on prairie soil. This is an excellent pasture grass to take the place of the wild grasses, as it yields a large amount of early and late feed. Sow about twenty-five pounds per acre.

TALL MEADOW OAT GRASS (*Avena elatior*).—A hardy perennial much used in the south and west. Its roots penetrate deep, and it thrives on any good soil. It yields a heavy crop, and is valuable both for meadow and pasture. If used alone, sow about thirty to forty pounds per acre.

BERMUDA (*Cynodon dactylon*).—No other grass is better known in the south than this variety; it is easily grown from seed and also by sodding. It is splendid for pasturage and is best for making lawns; for this purpose it cannot be excelled, if cut close occasionally; it will grow thick and dense, making a regular carpet. It is superior (for lawns or golf links) to any lawn grass mixture on the market.

Red Clover.

RED CLOVER (*Trifolium Pratense*).—This is a fine grass for sowing late in fall, for cutting early in spring and feeding green to stock of all kinds. Can also be sown early in spring for pasture. Sow 8 to 10 lbs. to an acre.

WHITE DUTCH CLOVER (*Trifolium repens*).—Same as the red excepting the flowers are white; generally used for pasturage.

ALFALFA OR LUCERNE (*Medicago sativa*).—This clover-like plant, growing from two to three feet in height, is especially adapted for dry climates and soils. It strongly resembles clover in habit of growth and feed value, but withstands drought much better. It is a perennial plant on well-drained soils, so that when once established it will continue to produce large crops from five to ten years, sometimes longer; on rich high land it produces four to five cuttings in a single season. The plant is quite hardy, but does not succeed well on low, wet soils.

CRIMSON CLOVER (*Trifolium incarnatum*).—An annual variety providing large crops of green forage, or if cut while in bloom will make excellent hay. It should not be allowed to grow too old, or the seed-heads are liable to cause hair-balls to form in the animals' stomachs, to their great injury. It is for use as a green manure and cover crops that this plant is most highly esteemed. It improves poor lands and restores to fertility those worn by excessive culture. Seed should be sown early in August or September, so that the plants will become well established before winter. It is especially valuable for sowing amongst corn or other crops at time of the last cultivation, as it will secure a good stand in the partial shade, forming an excellent cover for the land after the other crop is taken off, and will afford a close, dense mat of growing foliage to turn under in the spring. Sow at rate of 15 lbs. to the acre.

SAINFOIN OR ESPARSETTE (*Onobrychis sativa*).—This is a very valuable perennial plant for the Southern States; it is quite hardy after it becomes well established. It has strong, deeply branching roots, and

will succeed in very dry soils, sand, and even in gravel. Sow 2 to 3 bushels per acre. Bushel weighs about 24 lbs.

JOHNSON GRASS (*Sorghum halapense*).—This grass is popular in some portions of the South and West, being of quick growth, the stout stalks reaching a height of six or eight feet before flowering; should be cut for hay when it is coming into bloom. When once established, it is difficult to eradicate. 25 lbs. to the bushel; about 1 bushel to the acre.

TEXAS RED RUST PROOF OATS.—This is the only variety of oats which is not liable to rust here in the South. It is one of the most profitable crops that can be grown for winter and spring feeding and will save lots of corn. The seed can be sown beginning of October until latter part of November and again during January and February. They should not be sown as thick as the other kinds, as they have a tendency to stool. Use one and a half bushels to the acre.

TEXAS RYE.—This is sown during the fall months up to January for forage and pasture. During Winter and early Spring it also does well if planted thinly with Texas Rust Proof Oats.

TEXAS BARLEY.—Should be planted in Fall and Winter for forage and is used for feeding, in its green state. It is eagerly eaten by live-stock of all kinds and is very nutritious. Sow on rich soil.

GERMAN MILLET.—This is the favorite variety for planting in good land to produce a large crop of hay or forage during the summer months. Being of very strong growth, the seed should not be sown too thickly; one bushel to the acre.

VELVET BEAN.—This bean originated in Florida a few years ago, and has become very popular with the farmers and planters in the South. It makes a splendid forage for stock and makes a splendid fertilizer, if turned under like cow-peas. The vine is most rampant in growth, branching freely and growing quickly to a great length; they are thickly clothed with large green leaves. Planted to enrich the soil, they should be allowed to die down, as it is impossible to plow under the dense network of strong vines while in the growing state.

GIANT BEGGAR WEED.—This quick-growing plant is now extensively grown in the Southern States. Sown from beginning of April until June, the seed being small should be simply rolled after sowing broadcast. Eight to ten pounds are sufficient for an acre of land; growth is extremely rapid, and the plant may be pastured or cut for forage at any stage, but should be cut for hay before the seed ripens and slowly dried in windrows like clover.

BURR OR CALIFORNIA CLOVER.—This clover is supposed to come from Chili. It is often mistaken for alfalfa in growth, but is quite distinct in blossom. Burr clover produces 2 or 3 yellow blossoms in each cluster and lucerne has several blue blossoms.

soms in an elongated head. It furnishes good grazing and hay. The seeds are produced in burr-like pods and are hard to remove, therefore, they are sown in the burr, half bushel to the acre. Cover the seed lightly and sow in the fall.

DWARF ESSEX RAPE.

Farmers of the United States are just beginning to find out what England has known for many years, that the Fodder Rape is the most valuable green feeding plant known, especially for sheep. Dwarf Essex Rape is easily grown and perfectly hardy, and possesses remarkable fattening properties. One acre will pasture thirty-six head two months and lambs will make a gain of 8 to 12 pounds a month. *Pigs and cattle are also very fond of it.* The plant is a rank grower and should have heavy manuring as well as high cultivation. Any corn soil will grow Rape. Sow the seed by the end of June, and the crop can be ready to feed at a season when it is most needed. It does well sown with oats. After the oats are cut the Rape grows rapidly. *From ½ acre there were cut 9¾ tons of green rape,* or it yielded at the rate of 19 tons per acre. If the soil is rich and clean sow broadcast; if not so clean, sow in drills and cultivate as for corn. When sown broadcast use 5 lbs., and if in drills, 2 lbs. to the acre. True Dwarf Essex Rape, our own importation.

AUSTRALIAN SALT BUSH.—A forage plant for alkali soils, and for regions subject to periodic drought. This is a most wonderful forage plant, as it will grow freely in arid and alkali lands, that will produce no other vegetation, yielding a marvelously liberal foliage which is eagerly eaten by all kinds of stock. It is of creeping habit. From twenty to thirty tons of green fodder have been harvested from one acre. It has further been proved that after three or four crops have been grown on alkali land, the soil is then capable of producing any other vegetation. In many sections of the states this is in itself of priceless value. This plant has been very extensively tried at the California experimental station, where single plants, grown on the poorest alkali land, have reached a diameter of sixteen feet in one season. One pound of seed will plant an acre. It grows readily from seed, and requires no cultivation.

VETCHES.

SAND, WINTER OR HAIRY (*Vicia villosa*).—This is the best variety and thrives well on poor soil, especially arid sandy lands. It is best sown in the fall, but does well also if sown early in spring. It grows to a height of from three to four feet and can be cut twice for fodder, first when the blooms appear and then it can be cut for the seed. Very nutritious and hardy. Sow one and one-half bushels to the acre.

TEOSINTE (*Reana luxurians*)—This is a valuable forage plant resembling Indian Corn in appearance and grows very quickly, producing a large quantity of forage. The leaves are much longer and broader than

those of Indian Corn, also more abundant, while the stalks contain a sweeter sap. The forage is exceedingly tender and is greedily eaten by horses, mules and cattle. As it is quite susceptible to cold, the seed should not be sown before latter part of February, beginning of March.

SORGHUM.

EARLY AMBER.—This variety is extensively grown here in the South for forage and cutting green when half grown, and makes a splendid fodder for feeding horses, mules and cattle. It is also grown on a small scale for making syrup in such localities in the South where sugar cane does not thrive well.

EARLY ORANGE.—This sort is almost similar to the Early Amber, but is said to produce more saccharine matter and juice.

KAFFIR CORN.

This is a variety of Sorghum which grows from four to five feet in height; in habit of growth the plant is low, stocks perfectly erect and foliage wide. It produces an abundance of forage, of which horses and cattle are fond of; it also produces a large quantity of seeds which makes splendid feed for fowl of all kind. Requires 10 lbs. to sow an acre.

PEANUTS.

Peanuts can be raised with but little expense, and are an exceedingly productive and paying crop. They are planted in much the same manner as potatoes, and require but little care beyond hilling up the young plants.

SPANISH.—This is an early variety and very prolific. The pea is smaller than the Virginia and Tennessee, but fills out well, making no pops. Can be planted close in the row and yield largely per acre. Splendid for feeding hogs; also fine for roasting. Should be sown during March, April and May.

WHITE VIRGINIA.—This is the original peanut or *pindear*, as it is sometimes called. It is considered the best variety for growing South. Produces pods or shells from 1½ to 2½ inches in length containing from 3 to 5 peas in a pod. Very productive and fine for roasting.

Merchants send in your orders to us; as our seeds always prove satisfactory. Write us for special discount.

NOVELTY.**AILANTHUS.****(TREE OF HEAVEN.)****AILANTHUS, OR TREE OF HEAVEN.**

This splendid ornamental tree is a native of China, where it is called the Tree of Heaven, from its great beauty. It is very hardy and grows in any soil, no matter how poor, and grows from 6 to 10 feet high from seed the first summer. The leaves, from 5 to 6 feet in length, give it a grand appearance. Nothing outside the tropics can rival it for lawn decoration. Large panicles of bloom, followed in season by great clusters of colored seed pods, make the tree a continual thing of beauty. The cut represents a portion of a tree in bloom, and also a seedling tree four months from sowing. For beautifying lawns and flower beds nothing can be finer, they being even more beautiful than Ricinus or Cannas. Pkt. 10 cts.

FLOWER SEEDS.**ANNUALS AND OTHER FLOWERS BLOOMING THE FIRST YEAR FROM SEED.**

AGERATUM (*Mexicanum*).—Fine plants for masses in the garden for winter and early spring blooming; flowers are brush-like in appearance; remain long in bloom.

ABUTILON OR BELL FLOWER.—These plants are easily grown and bloom profusely during the early spring and summer months. They grow readily from seed and make large fine shrubs, and are beautiful with their bell-shaped flowers.

ALTHEA ROSEA (*Hollyhock*).—A beautiful plant growing from 4 to 6 feet high and

producing a large number of flowers along the main stem or trunk, of variegated colors. Sow from October till April.

ADONIS, AESTIVALIS, OR FLOS ADONIS.—Has fine, pretty foliage, with bright scarlet flowers. November till April.

ALYSSUM MARTIMUM.—This is of easiest culture and its fragrant, pure white flowers which it bears in clusters bloom almost all summer and are splendid for making bouquets. Sow October till March.

ANTIRRHINUM MAJUS.—Snapdragon. Choice mixed. Showy plant of various colors. About two feet high. Should be sown early, if perfect flowers are desired. Sow from October till March.

ASTER.—German Quilled. Perfect double quilled flower, of all shades, from white to dark purple crimson. One and a half feet high.

ASTER.—Trufant's Pæony-Flowered. Large double pæony-shaped flowers, of fine mixed colors; one of the best varieties. Two feet high; sow from December till March. They can be cultivated in pots to perfection.

AMARANTHUS CAUDATUS.—Love Lies Bleeding. Long red racemes with blood red flowers. Very graceful, three feet high.

AMARANTHUS TRICOLOR. Three-colored Amaranth. Very showy; cultivated on account of its leaves, which are green, yellow and red. Two to three feet high.

AMARANTHUS BICOLOR.—Two-colored Amaranth. Crimson and green variegated foliage; good for edging. Two feet high.

AMARANTHUS SALICIFOLIUS.—Fountain plant. Rich colored foliage; very graceful. Five to six feet high. All varieties of Amaranthus should be sown from February to June.

AQUILEGIA.—Columbine. Beautifully, curiously formed, various-tinted flowers. Bloom early in spring and fall. Hardy perennial; sow from October till March.

BALSAMINA CAMELIA-FLORA.—Double Mixed Balsams. A free blooming plant of easy culture. The flowers resemble a camellia in form and are of large size. Our mixture contains all the finest variegated colors and cannot be excelled. Sow from February till August.

BALSAMS. DOUBLE WHITE.—This is a perfectly double variety and pure white.

BELLIS PERENNIS.—Double Daisy. Easily grown from seed and come into flower in a short time; they are indispensable for spring flowers for the garden. October till February.

BROWALLIA.—Handsome plants, eighteen inches tall, with shining green foliage and bright blue and pure white flowers mixed. Sow in February and March. Also in November under glass.

CACALIA COCCINEA.—Tassel Flower. Small tassel-like blooms, often called "Flora's Paint Brush," gracefully borne on long stems. February till May.

CALENDULA (*Officinalis*).—Pot Marigold. An aromatic herb; but is mostly planted for its beautiful golden yellow flowers. Sow in January till April.

Double Mixed Balsams.

CALLEOPSIS OR CORREOPSIS.—Compact plants, covered with bright golden flowers, each marked with dark brown center. Sometimes called *Bright Eye Daisy*. Sow December to April.

COCKSCOMB (*Celosia cristata*).—Is easily grown from seed, and is certainly one of the most showy and brilliant of annuals. The combs of the varieties grown from our seed often grow a foot or more across the top. Sow from February till August.

GLASGOW PRIZE.—A fine dwarf variety, dark leaves and crimson combs.

DWARF MIXED.—Large solid heads of bloom, red, yellow and variegated colors.

CAMPANULA SPECULUM.—Bell-Flower, or Venus' Looking-Glass. Free flowering plants of different colors, from white to dark blue; one foot high. Sow December till March.

CENTAUREA CYANUS.—Bottle Pink. A hardy annual of easy culture, of various colors; two feet high.

CENTAUREA SUAVOLENS.—Yellow, Sweet Sultan. December to April.

CINERARIA MARITIMA.—"Dusty Miller." A handsome border plant, which is cultivated on account of its silvery white leaves. Stands our summer well.

COLEUS.—A well known and beautiful bedding plant, which can be easily propagated by seeds which produce different shades of colored plants.

CHRYSANTHEMUM.—Double Mixed. Fine summer bloomers of different colors; they make a fine showing when planted in groups. March to May.

CANNAS.—Finest mixed colors, tall and dwarf. Sow from February till April.

CANDY-TUFT.—White and Purple. Among the most useful of perfectly hardy annuals; produces neat clusters of flowers very freely,

which are very fragrant. Sow October till April.

Cosmos.

COSMOS.—Of very rapid growth and make large bushes, fully 5 to 6 feet high, which are a mass of elegant foliage. From August until November each plant is covered with hundreds of showy blossoms. The flowers resemble single dahlias. They are easily raised and make a grand display. The flowers are of many different colors.

DIANTHUS CHINENSIS (Double Chinese Pink).—Produces clusters of small double flowers, fine mixed; one foot high. From October to April.

DIANTHUS HEDDEWIGII.—Finest mixed. (Japan Pink). This is a very showy variety. The flowers are large and of brilliant colors; one foot high. Sow October till April.

DIANTHUS BARBATUS (Sweet William).—Of beautiful colors and very showy; should be sown early in order to have them bloom the first spring. One and a half to two feet high. Sow October till April.

Dianthus Hedewigii.

DIANTHUS CARYOPHYLLUS, MARGARITAE.—Marguerite Carnation. These lovely, fragrant Marguerite carnations will bloom in about four months, after sowing the seed. The plants do well in pots, as well as in the open ground and are of vigorous growth and require no support. Eighty per cent produce double flowers and are exquisitely sweet. They are of remarkable colors and shades. Sow November till April.

DELPHINIUM.—Larkspur. Well known annuals of great beauty and noted for richness of colors.

DOUBLE DWARF ROCKET.—Finest mixed. Tall Rocket. Double mixed.

DAHLIA.—Double; large flowering. The double dahlia can be grown easily from seed and produces fine flowers the first year. The seed should be sown from February till June.

ESCHOLTZIA (California poppy).—Mixed. Flowers yellow, orange and white; leaves very finely cut; grows 10 to 12 inches; very showy. December till April.

GAILLARDIA.—This plant produces flowers of magnificent size and wonderful profusion, and are greatly admired for their fine forms and rich blending colors. Sow January till April.

GERANIUM ZONALE.—This is a decorative plant, very attractive when grown in pots and transplanted in the summer in a half-shady place in the garden, where they will bloom profusely. They are of all colors and are easily grown from seed, when sown in boxes.

HELIOTROPE.—Mixed. This flower is loved by almost every one and is as easily grown from seed as the phlox or petunia. It is a strong grower and produces flowers in purple, lavender and white colors in profusion.

HELICHRYSUM MONSTROSUM ALBUM AND RUBRUM.—Red and white everlasting flower. Very showy double flowers, two feet high. December to April.

HELIANTHUS FLORA PLENO. (Double Flowering Sunflower.) This variety grows about the same height as the large Russian Sunflower; but produces an abundance of flowers which are smaller in size, but very attractive. Said to be anti-malarious. Can be sown from February until June.

RUSSIAN SUNFLOWER.

RUSSIAN SUNFLOWER.—This is highly prized by poultry raisers and farmers as a cheap food for fowls. It is immensely productive and can be raised cheaper than corn, as any waste piece of ground will suffice. It is the best egg producing food known. The seed is also used here on a large scale for feeding hard-bill birds, such as the red bird or Cardinal and parrots, which are very fond of it.

LOBELIA (*Erinus compacta*).—Very dwarf plants, growing four to six inches high and forming dense masses of blue flowers. Of easy culture and well adapted for bedding, edging, pots or rockeries. Sow October till April.

MATHIOLA (*Annua*).—Sweet scented stocks. A charming hardy annual, produces flowers from white to dark blue and crimson colors. Sow in rich soil from October till April.

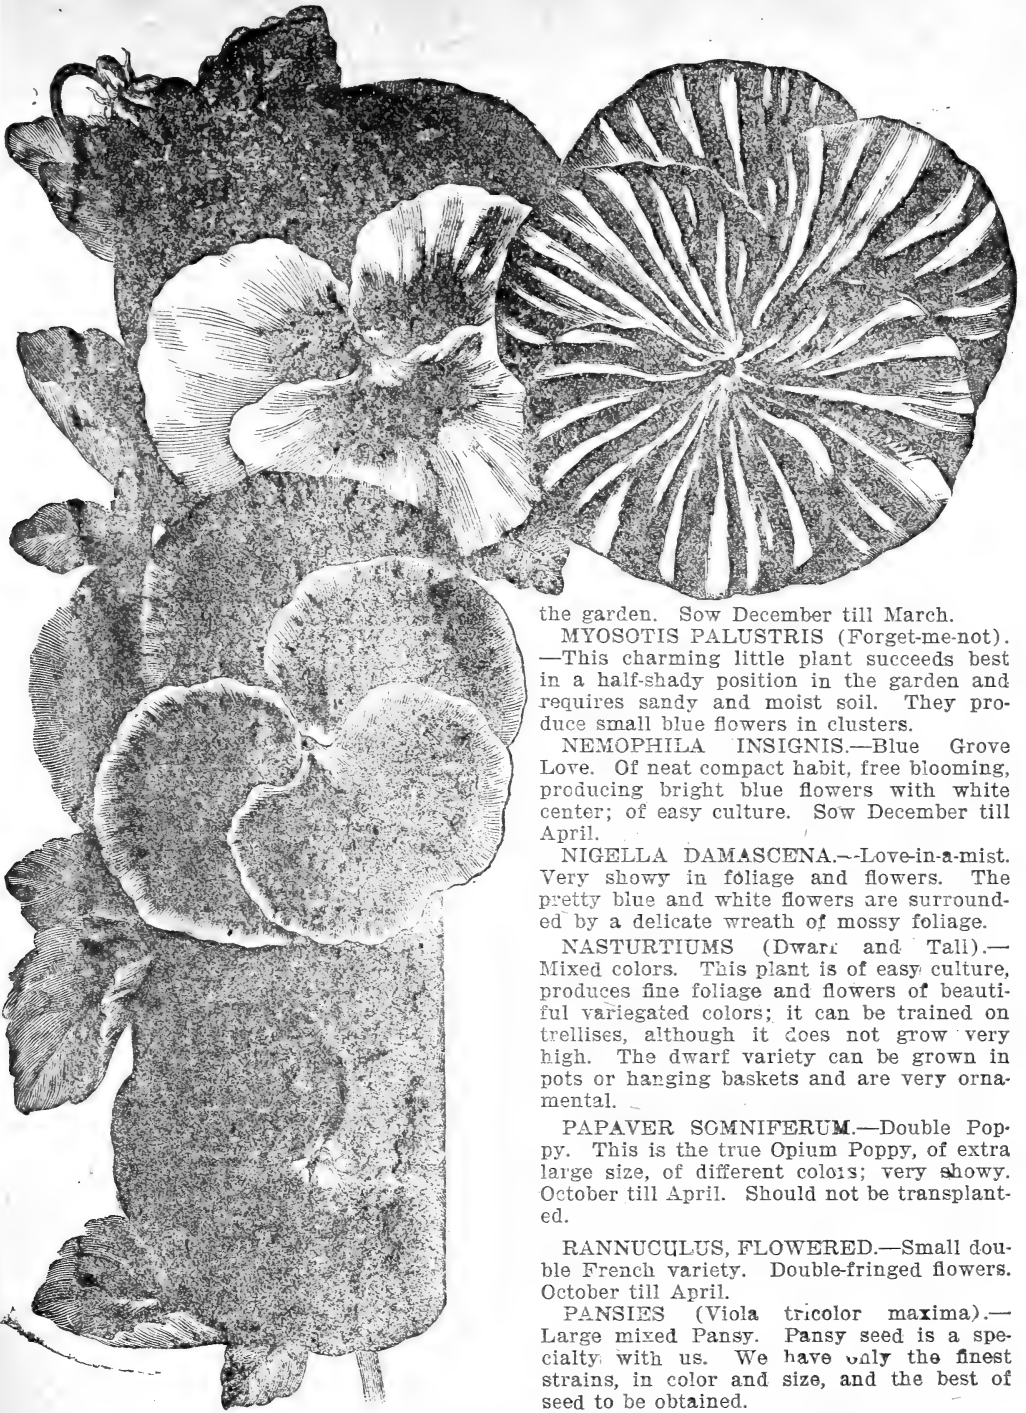

MESEMBRYANTHEMUM CRYSTALLINUM. (Ice plant.)—This beautiful plant is splendid for growing in hanging baskets or for bedding. It has singular icy foliage. Sow February till April.

MIRABILIS JALAPA (Marvel of Peru).—This is the well-known Four O'Clock of variegated and mixed colors. It grows as easily as weeds and is splendid to plant in garden spots, near fences and places where other flowering plants will not do well. They produce an abundance of flowers of brilliant colors. February till June.

MARIGOLD, FRENCH DWARF.—A very dwarf growing compact plant which produces flowers of yellow and brown color. January till April.

MARIGOLD, TALL AFRICAN.—This variety is stronger in habit and produces larger flowers, yellow in color.

MIGNONETTE (*Reseda odorata*).—A quick growing annual, highly esteemed for its delicate fragrance. It grows most rapidly and produces the largest and finest spikes of blossoms during cool moist weather of early spring and fall months; but will bloom all summer if seed is sown in the spring. Sow December till April.

Pansies.

MIMULUS TIGRINUS (Monkey flower).

—Tender-looking plants, with peculiar shaped and brilliantly colored flowers, blotched and spotted in every conceivable manner. Do very well, if planted in half-shady place in

the garden. Sow December till March.

MYOSOTIS PALUSTRIS (Forget-me-not).

—This charming little plant succeeds best in a half-shady position in the garden and requires sandy and moist soil. They produce small blue flowers in clusters.

NEMOPHILA INSIGNIS.—Blue Grove

Love. Of neat compact habit, free blooming, producing bright blue flowers with white center; of easy culture. Sow December till April.

NIGELLA DAMASCENA.—Love-in-a-mist.

Very showy in foliage and flowers. The pretty blue and white flowers are surrounded by a delicate wreath of mossy foliage.

NASTURTIUMS (Dwarf and Tall).—

Mixed colors. This plant is of easy culture, produces fine foliage and flowers of beautiful variegated colors; it can be trained on trellises, although it does not grow very high. The dwarf variety can be grown in pots or hanging baskets and are very ornamental.

PAPAVER SOMNIFERUM.—Double Poppy.

This is the true Opium Poppy, of extra large size, of different colors; very showy. October till April. Should not be transplanted.

RANUNCULUS, FLOWERED.—Small double

French variety. Double-fringed flowers. October till April.

PANSIES (*Viola tricolor maxima*).—

Large mixed Pansy. Pansy seed is a specialty with us. We have only the finest strains, in color and size, and the best of seed to be obtained.

IMPROVED GIANT TRIMARDEAU.—Re-

markable for the large size of the flowers, which, however, are not so circular in form as the German varieties. Most of the flowers are marked with three large blotches or spots.

LARGE MIXED GERMAN PANSIES.—These are famous for their almost endless variety of charming shades of colors, united with good size and most perfect form of flowers. They bloom profusely and embrace all the solid or self-colors; delicately shaded flowers; five spotted and three spotted. Sow October till March.

Petunia Hybrida.

PETUNIA HYBRIDA.—Petunia. Splendid mixed hybrid varieties. A very decorative plant of various colors, well known to almost every lover of flowers. Plants are of spreading habit; about one foot high. January till May.

PHLOX DRUMMONDII.—Drummond's Phlox. One of the best and most popular annuals in cultivation. Their various colors and length of flowering, with easy culture, make them favorites with every one. All fine colors mixed. One foot high. December till April.

PHLOX DRUMMONDII GRANDIFLORA ALBA.—Pure white, some with purple or violet eye.

PHLOX DRUMMONDII GRANDIFLORA STELLATA SPLENDENS.—This is admitted to be the richest colored and most effective of all large flowered Phloxes. It combines all the good qualities of the Splendens, with the addition of a clearly defined, pure white star, which contrasts strikingly with the vivid crimson of the flowers.

PORTULACA.—A small plant of great beauty, and of the easiest culture. Does best in a well exposed situation, where it has plenty of sun. The flowers are of various colors, from white to bright scarlet and crimson. The plant is good for edging vases or pots; or where large plants are kept in tubs, the surface can be filled with this neat little genus of plants. Half foot high. February till August.

PORTULACA GRANDIFLORA, FL. PL.—Double Portulaca. The same variety of col-

ors with semi-double and double flowers. Half foot high. February till August.

PRIMULA VERIS.—Crowslip. An herbaceous plant of various colors, highly esteemed in Europe. Half a foot high. December till April.

Sweet Violet.

PRIMULA CHINENSIS.—Chinese Primrose. A green-house plant which flowers profusely and continues to bloom for a long time; should be sown early to insure the plant flowering well. Different colors; mixed, per package, 25 cents. One and a half feet high. October till February.

PYRETHRUM AUREA.—Golden Feather. The flowers resemble Asters. It has bright yellow leaves, which makes it very showy if massed as a border.

RICINUS. (Castor Oil Bean).—Semi-tropical plants, which are grown largely for their great size and picturesque foliage. The plants are surmounted by large spikes of flowers and brilliantly colored spiny seed pods. March till May.

SENSITIVE PLANT. (*Mimosa pudica*).—The Sensitive Plant is very chaste and elegant in foliage, the leaves being delicately pinnated, while it bears small pink flowers in globose heads. It affords much amusement by its sensitive character—even when slightly touched the leaves instantly close and droop; easily grown.

SALVIA SPLENDENS (*Large-flowering Scarlet Sage*).—Under our hot summer sun, "this flame-colored beauty" is the most gorgeous of all plants. For months the blaze of flaming scarlet is intensely brilliant, with great spikes of bloom completely concealing the foliage. A single plant will carry as many as two hundred spikes of flowers, each spike ten to twelve inches in length.

SCABIOSA (*Mourning Bride*).—The old and well-known *Sweet Scabious* is not so generally cultivated as it deserves. The perfectly double flowers are useful for cutting; they are gracefully borne upon long slender stems, well above the foliage.

SWEET SULTAN (*Centaurea suaveolens*).—The Yellow Sweet Sultan produces its

handsome, brush-like, bright-yellow flowers in wonderful profusion. The flowers have long stems and keep well.

TORENIA FOURNIERI.—Charming plants for pot culture and in the open garden; are very attractive in beds or masses; exceedingly free bloomers. They produce lovely velvety-blue flowers, with three large spots of darkest blue and a bright yellow throat; bloom until frost. February till May.

VERBENA HYBRIDA.—Extra fine mixed. Free-flowering, hardy annuals, of low spreading growth. Single plants in rich soil will cover a space three to four feet in diameter and furnish a profusion of flowers. The flower-heads are of good size and fine regular form, highly valued for cut-flower decorations. If the flowers are kept cut off before seeding, the plants will bloom much more freely. Of late years the plants raised from cuttings and sold by florists have become quite diseased. Plants grown from seed are not only cheaper, but are strong and vigorous in growth, with rich dark-green foliage, and continue in bloom until cut off by heavy frosts.

WHITE VERBENA.—Flowers pure white and of fine fragrance.

ITALIAN STRIPED.—Very showy; striped flowers of many bright colors.

VINCA.—Rosea and Alba. Splendid pot and bedding plants; eighteen inches high, with glossy green leaves and circular flowers.

ZINNIAS.—No flowers are easier grown from seed in the open ground and they are a beauty in the garden when planted in groups or masses. They bloom during the whole summer. They have been improved upon so much that a majority of the new varieties resemble the Dahlia from a distance. Sow from February till August.

CHOICE DOUBLE MIXED.—Double flowers, of good form and quite large size; brilliant colors.

DOUBLE WHITE.—Dahlia-like flowers, perfectly double and of the purest, snowy-white.

CLIMBERS.

ANTIGONUM LEPTOPUS (*Rosa Montana*).—This is one of the finest perennial climbers for the South. It is a native of Mexico and is well adapted to our climate. It is of rapid growth and produces long racemes of beautiful pink flowers. In the winter the vine should be cut down and the roots covered with moss or straw. Flowers freely the first year. Sow February till April.

ARISTOLOCHIA ELEGANS. (Dutchman's Pipe).—This plant is of vigorous growth and is most suitable for the Southern States. It bears large flowers of a rich purple color, with irregular markings of creamy white and golden yellow center. This plant blooms when quite young and continues until killed by frost. Sow from January till March.

BENINCASA CERIFERA (*Wax Gourd*).—A strong growing vine with long-shaped, dark crimson fruit, which, when ripe, has a

fine musky odor; it is splendid for making preserves.

BALLOON VINE (*Cardiospermum*).—The Balloon Vine or "Love-in-a-puff" is of rapid growth, with pretty foliage and inflated capsules or seed-pods.

COBAEA SCANDENS.—Of rapid growth and large size, with fine foliage. Most graceful with large bell-shaped flowers of a beautiful violet hue.

CYPRESS VINE.—Delicate fern-like foliage and beautiful star-shaped flowers.

SCARLET.—Intensely rich scarlet.

WHITE.—Purest paper white.

CURCURBITA.—Ornamental Gourd. Mixed. This is a fine climber, making fine shade and producing gourds of all shapes and form. Sow February till April.

CURCURBITA LAGENARIA DULCIS.—Sweet Gourd. This is a strong growing vine which produces long green club-like fruit, which makes a palatable dish when used green like squash.

DOLICHOS. (*Hyacinth Bean*).—Of extra rapid growth; runs from 20 to 30 feet high and produces purple and white flowers, which turn into purple beans. Very ornamental.

EVENING GLORY (*Ipomaea Bona Nox*).—This vine is of rapid growth and produces beautiful large white flowers, which open in the evening; it is often advertised as the Moon-flower.

Maurandia Barclayana.

MAURANDIA BARCLAYANA.—Mixed. Rapid growing vine producing rose, purple and white colored flowers and elegant foliage.

MINA LOBATA.—The flowers appear on fork-like racemes, rising almost erect out of the dense and luxuriant foliage; they are, as buds, at first bright red, but change through orange-yellow to yellowish white when in full bloom. It is a quite rapid-growing climber, if started early in pots under glass.

MOMORDICA BALSAMINA.—Balsam Apple. This is a beautiful delicate climber of luxuriant foliage; it produces a warty, elongated fruit, which when ripe turns red. The fruit, when ripe, is put into a glass jar with

whiskey and is splendid for healing cuts and bruises. Sow March till May.

MORNING GLORIES. (*Imperial Japanese*).—This is one of the greatest improvements of the common Morning Glory. They are of an increased size, of beautiful, variegated colors and some are fringed. The foliage is also very pretty, as some of the leaves are marbled with white and golden yellow spots. No garden should be without this marvelous flower. Sow February till May.

LUFFA ACUTANGULA (*Dish Rag Vine*).—A rapid growing vine, with large foliage; splendid for making shade or covering unsightly outhouses or walls. It produces long green fruit, which when dry, can be used for washing dishes; also in making ornamental baskets.

Mina Lobata.

Flowering Peas.

SWEET PEAS (Mixed).—This flowering pea is too well known to be described. Our mixture consists of all the finest and latest introduced varieties and cannot be surpassed for quality.

BLANCHE BURPEE (Pure White).—A grand, large flower of pure whiteness. Vines are of strong growth, blooming profusely throughout the season.

Sweet Peas. (Mixed.)

Momordica Balsamina.

FLOWERING BULBS.

ANEMONES.—Double Flowering. The roots should be planted in spring and fall, in pots, boxes or the open ground. Of different colors; fine for planting in masses with hyacinths and Ranunculus.

CALLA LILY. (*Lily of the Nile*).—This is a beautiful pot plant and is very ornamental when in bloom for home culture. The proper time to plant them is in October and November; they can also be planted throughout winter and spring. They require a great deal of moisture; they are splendid for fish ponds and fountains and thrive well if the pot is half elevated above the water.

Price 25c.

CHINESE SACRED LILIES.—This is one of the finest bulbs for in-door culture. It should be planted in a bowl or wide dish, in which gravel stones or pieces of brick have been put in place; then fill the bowl a little over half full of water and place in a dark room for two or three weeks to draw root, after which it can be gradually brought to the light, and will bloom shortly thereafter. It produces beautiful flowers on trusses of pure white in color, with yellow center. Price 15c each.

DAHLIAS.—This is one of the leading bulbs grown in the South, especially in the vicinity of New Orleans; they are grown mostly for flowers for "All Saints" day. The roots we offer are all of double flowers and of all colors. Should not be planted before latter part of March, beginning of April.

Price 22c. each, \$2.50 per doz.

GLADIOLUS.—These summer-flowering bulbs are easily grown and produce a great display of brilliant flowers at small expense. Our stock is grown from the most beautiful French hybrid varieties, embracing a grand range of the most beautiful shades of colors, combined with large size and fine open form of flowers.

Price 50c. per doz.

GLOXINIAS (*Hyorida*).—This is one of the finest and easiest grown bulbs for window-pot culture for the South. They do very well in half shady situations and produce beautiful bell-shaped flowers of all colors, a good percentage being variegated. The leaves are an ornament for their velvety texture. When in bloom they require a good deal of moisture. Plant early in spring in sandy soil.

Price 25c. each.

HYACINTHS.—This is one of the easiest outdoor bulbs to plant. They are double and single flowering and of red, blue, white, pink and yellow colors. Plant from October till March. They can also be easily grown in pots or in bottles with water. If put in bottles, use a pickle jar with the mouth large enough to rest the bulb on top; fill with water and put in a dark room for two or three weeks; then put it gradually to the light and in a short time it will bloom.

Price 50c. and 75c. per doz.

NARCISSUS.—Double White, Paper-White, Trumpet Major. These are fine bulbs for open-ground planting for early winter and spring flowers. They require no attention after being planted. Should be planted from October till February.

Price 40c. per doz.

HARDY JAPANESE LILIES.

LILIUM AURATUM (*The Golden-Banded Lily of Japan*).—This is the largest and finest of all Lilies. The grand open star-like flowers frequently measure ten inches in diameter and are delightfully fragrant. The petals are a clear ivory-white, banded with rich golden yellow and heavily spotted at base with deep crimson.

Price 20c. each.

LILIUM LONGIFLORUM.—A hardy variety having long, trumpet-like, pure white flowers, identical with those of the well-known *Bermuda* or *Easter Lily*. It is of strong growth and later in flowering when planted in the open ground.

Price 15c. each.

LILIUM SPECIOSUM MONSTROSUM ALBUM.—The flower-stalks of this variety are broad and flattened. The flowers of large size are purest white, with petals heavily reflexed.

Price 20c. each.

LILIUM SPECIOSUM RUBRUM, OR ROSEUM.—Very hardy and free flowering. Flowers of large size and fine open star-like form, with petals well reflexed; the petals are white, shaded with deep rose.

Price 15c. each.

LILIUM TIGRINUM FLORE PLENO (*Double Tiger Lily*).—This variety is of strong growth and great freedom in blooming, while each flower is quite double, having several rows of showy tigered petals.

Price 15c. each.

SCILLA PERUVIANA.—These bulbs produce fine blue and white flowers, which are borne on a long stem and formed like a truss. They are of easy culture; should be planted in large pots and taken into the house when the thermometer predicts freezing. It is one of the most beautiful flowering bulbs known and is worthy of a trial. Plant October till February.

Price 25c. each.

TULIPS. (*Double and Single*).—This bulb is easily grown and only flowers to perfection, when we have a severe winter or snow weather. Still the bulbs are so cheap that anyone can risk to grow them during winter for their handsome flowers. Do not cover too deep and plant from November to February.

Price 40c. doz.

TUBEROSES.—Large Double. This produces a fine cluster of pure white flowers, which grow upright on a single stem. Very useful for making bouquets and floral work of all kinds. It is very fragrant and is easily grown in the open ground.

Price 50c. doz.

MISCELLANEOUS.

ALBERT'S PLANT FOOD. BEST FERTILIZER FOR HOUSE PLANTS.

This is a scientific preparation containing in a highly concentrated and easily soluble form, the food element required by plants. It is odorless, clean to handle, quick in its action and unequalled in its effects. Inside each tin is a SMALL SPOON holding the exact quantity for dissolving in a quart of water. By its use plants acquire a sturdier growth, fuller developments and a manifold increase in bloom. For palms, ferns, India-rubber plants, it is by far the most complete, most effective, most economical and easiest applied fertilizer made. The analysis is as high as it is possible to make a chemical Plant Food, which at the same time can be used without risk of injury to the plants. It is put up in neat tins as shown in cut, and full directions are given on outside of each box. Can be safely mailed.

Price, 15c; each, Postage. 8c extra.

VEGETABLE PEAR (*Sechium Edule*).—This vegetable is generally called "Mirliton" in our market. It makes a rapid growing vine, with grape-like leaves. The fruit is used like squash or egg-plant. It has only one seed which is enclosed in the pulp and the whole fruit has to be planted. Price 15c each. Should be planted in March and April.

RHUBARB ROOTS.—Splendid for making pies; should be planted early in spring or in fall. When once established will remain and thrive for several years.

STRAWBERRIES.

This is one of the easiest and finest fruits to grow for family use, as well for the market; no family garden should be without them. They thrive best in a rich sandy loam. Where this cannot be had, a good mixture of horse-manure, well plowed under and the soil well pulverized, will have the desired effect in growing fine, large berries. They should be set out from October till February. The best varieties for our section of country are the Hoffman seedling, Cloud and

Michel's Early. Price 50c per 100; \$4.50 per 1000. Price for larger quantities given upon application.

ARTICHOKE PLANTS.

We can furnish strong healthy plants in large quantities during proper seasons, these plants, if set out in October, November, December, will produce a fair crop of fruit in spring. Can be set-out until end of February.

Price, 25c, per doz; \$1 50 per 100.

FIG TREES.

CELESTIAL OR CELESTE FIG.—This is the only variety and best for our latitude; it is enormously productive, easily grown and its fruit is always in demand in our markets. We consider it one of the most profitable fruits which can be grown South. It is used to quite an extent for canning purposes. Price, 1 year old 25c, each, \$2.50 doz.

BIRD SEED.

We make a specialty in putting up extra cleaned Canary seed (mixed or plain) in cartons containing one pound, including a piece of cuttle-fish bone. Our mixture contains canary, hemp, rape and German millet seeds. We also have in bulk hemp, canary, rape, millet and sunflower seeds.

RAFFIA.

This is the best material for tying plants of all kinds to stakes, as it is not apt to rot as quickly as twine; it is splendid for tying bunches of vegetables of all kinds for market. Price 30c. per lb.

CRAFTING WAX.

LION BRAND.—This is the best wax to use for grafting and budding trees and roses $\frac{1}{4}$ lb. 15c., 1 lb. 40c.

THE PERFECTION JR., BROADCAST SEED SOWER.—The cheapest and best seed sower on the market. Price \$1.25 each. No gardener or farmer will sow seed by hand any more, if he can buy a seed-sower at such a low price. They save seed, time, labor and distribute the seed more uniformly than by hand.

FRENCH SCYTHE BLADES.

We have a fine assortment of these valuable blades, which are of direct importation and considered the best scythe by professional mowers. We have different sizes and qualities; they range from 18 to 24 inches; the blue are a little higher in price.

Prices, Blue.—18-in., 80c; 20-in., 85c; 22-in., 90c; 24-in., \$1.00.

Prices, Plain.—18-in., 75c; 20-in., 80c; 22-in., 85c; 24-in., 90c.

We also have these blades *bridled or strengthened* which cost 35c each extra.

THE BEST AND CHEAPEST HAND SPRAY PUMP.

THE ELECTRIC BUG EXTERMINATOR.

BRASS. Price \$1.25 each.

This is one of the best and cheapest exterminators ever invented. It is durable, sim-

ple and easily handled. They are superior to any other bug or insect exterminator on the market. You can use kerosene, Paris green, London purple or any other solution with the sprayer without any danger of injuring the plants.

FINGER SPADES.

This tool is made to save the finger nails in weeding out all obnoxious weeds and grasses which generally grow between vegetable and flower plants. No one should be without them, as they are so cheap. Only 10c each.

TOBACCO DUST.

This is one of the best and cheapest insect destroyers known. It is also a good fertilizer. If you are troubled with *cabbage* flies and lice, also fleas and lice on cucumbers, melons and tomatoes use Tobacco Dust and you will get rid of them in a few applications. It also acts as a fertilizer, as it contains a good percentage of potash and ammonia. Price per package, 10 pounds, 25c; 50 pounds, \$1.00; per 100-pound sack, \$1.50.

WHALE OIL SOAP.

Very effective for cleansing trees of all kinds of insects and fungi; it is also a fine

remedy for destroying insects and lice on plants of all sorts. Use one pound soap in two quarts hot water, then dilute same; after this add 5 or 6 gallons cold water and sprinkle or spray trees or plants. Splendid for killing the Aphides on fruit trees.

HAMMOND'S SLUG SHOT.

This is a fine insecticide, if used in a dry state for destroying fleas and lice on cabbage and turnips; it also kills potato bugs and grub-worms. Should be applied in the morning when the dew is on the plants or just after a rain. Price, 5-pound packages, 30c; prices for larger quantities given upon application. We also have dusters for distributing the above powder. Price, half-gallon size, 35c each.

Ladies Favorite Pruning Shears.

Scollay's Hand Rubber Sprinkler.

SCOLLAY'S RUBBER HAND SPRINKLER.

A fine and handy device for sprinkling floral work cut flowers or pot plants. Very useful for dampening clothes or any kind of sprinkling. Made of the best rubber and with little care will last for years. Never gets out of order. They are so cheap, that no one should be without it. Price by Mail, post-paid, Largest size, \$1.10; Medium size, 70c.; small size, 60c.

LADIES' FAVORITE PRUNING SHEARS.

One of the handiest tools for pruning Rose bushes, shrubbery and plants of all kinds; also for cutting flowers. It is made of the best steel, highly polished and so small and light, that it can be carried conveniently in the pocket.

Price.....\$1.00 each.

FLORAL DESIGNS.

This is one of our specialties; in this department we have *two expert flower workers*, who cannot be excelled for their artistic and tasty work in artificial as well as natural flowers, which can be turned out on short notice. We carried the *First Prizes* at the Louisiana State Fair, 1900, against all competition, on the following work:

For Best Floral Design.

For Best Bridal Bouquet.

For Best Handle Basket of Flowers.

For Best Basket Arrangement of Roses.

We are always prepared to fill all orders for weddings, funerals, receptions and other occasions on short notice by telegram or letter, which will receive our personal and prompt attention. Our designs consist of Anchors, Crosses, Harps, Lyres, Gates Ajar, Crescent and Star, Pillows and any other designs of any other pattern which you may wish to have made. Our prices are most reasonable and are cheerfully given upon application. All our work is made of the best material and prices depend upon the size of the bouquet and design.

CUT FLOWERS.

We always carry a fine stock of beautiful Northern flowers, such as Brides and Bridesmaid Roses, White and Pink Carnations, Lilies of the Valley, Adiantums or Maiden Hair Ferns, Asparagus Plumosis and Fancy Fern Leaves, which we can always furnish on short notice.

FLORAL WIRE FRAMES.

We are headquarters for wire frames of all kinds for floral designs and are in a position to turn out any design or pattern submitted to us, on the shortest notice. Our prices are reasonable and workmanship first-class. We carry in stock the following designs: Wreaths, Anchors, Crosses, Lyres, Gates Ajar, Harps, Crescent and Star, Crescent and Lyre, with or without stands; Broken Columns, Pillows, Scrolls, from 8 to 36 inches.

Prices given upon application.

THE HOT BED.

Owing to the winters in the South, hot beds are not so much used as in the North, except to raise such tender plants as Eggplants, Tomatoes and Peppers. There is little forcing of vegetables done here, except as regards Cucumbers and Lettuce; and, if we do not have any hard frosts, the latter does better in the open ground than under glass. To make a hot bed is a very simple thing. Any one who has the use of tools can make the wooden frame; the sashes may be obtained from any such factory. I consider a wooden frame from five to six feet wide and ten feet six inches long a very good size. It should be at least six inches higher at the back than in the front, and covered by three sashes 3½x5 feet. The manure ought not to be over a month old; it should be thrown together in a heap, and when commencing to heat, be worked over with a fork, and the long and short manure evenly mixed. In this state the ground is generally low, and to retain the heat of the manure for a long time it is best to put the manure on top of the ground—that is, make a bank two feet longer and two feet wider than the frame. Keep the edges straight and the corners firm; when thrown up about eighteen inches trample the manure down to six or eight inches, then put on another layer of eighteen inches and trample down again; place thereon the frame and sash, and fill in six inches of good earth. After about five days stir the ground to kill the weeds which may have come up, then sow the seeds.

TABLE SHOWING THE QUANTITY OF SEED USUALLY SOWN UPON AN ACRE.

	Quantity per acre.	Quantity per acre.	
Artichoke, 1 oz. to 500 plants	½ lb.	Garlic, bulbs, 1 lb. to 10 ft. of drill	4 bu.
Asparagus, 1 oz. to 200 plants	5 lbs.	Hemp	½ oz.
Barley	2½ bu.	Kale, 1 oz. to 3,000 plants	4 lbs.
Beans, dwarf, 1 quart to 150 feet of drill	1¼ "	Kohl-Rabi, 1 oz. to 200 feet of drill	4 "
Beans, pole, 1 quart to 200 hills	½ "	Leek, 1 oz. to 200 feet of drill	4 "
Beet, garden, 1 oz. to 100 feet of drill	10 lbs.	Lettuce, 1 oz. to 250 feet of drill	3 "
Beet, Mangel, 1 oz. to 150 feet of drill	6 "	Melon, Musk, 1 oz. to 100 hills	1¼ "
Broccoli, 1 oz. to 3,000 plants	5 oz.	Melon, Water, 1 oz. to 25 hills	1½ "
Broom Corn	10 lbs.	Nasturtium, 1 oz. to 50 feet of drill	10 "
Brussels Sprouts, 1 oz. to 3,000 plants	5 oz.	Oats	2½ bu.
Buckwheat	½ bu.	Okra, 1 oz. to 50 feet of drill	10 lbs.
*Cabbage, 1 oz. to 3,000 plants	5 oz.	Onion Seed, 1 oz. to 200 feet of drill	4 "
Carrot, 1 oz. to 250 feet of drill	2½ lbs.	" for Sets	30 "
*Cauliflower, 1 oz. to 3,000 plants	5 oz.	Onion Sets, 1 quart to 20 feet of drill	8 bu.
*Celery, 1 oz. to 10,000 plants	4 "	Parsnip, 1 oz. to 250 feet of drill	5 lbs.
Clover, Alsike and White Dutch	6 lbs.	Parsley, 1 oz. to 250 feet of drill	8 "
" Lucerne, Large, Red and Crimson Trefoil	8 "	Peas, garden, 1 quart to 150 feet of drill	1½ bu.
" Medium	10 "	" field	2½ "
*Collards, 1 oz. to 2,500 plants	6 oz.	Pepper, 1 oz. to 1,500 plants	4 oz.
Corn, sweet, 1 quart to 500 hills	8 qts.	Potatoes	10 bu.
Cress, 1 oz. to 156 feet of drill	8 lbs.	Pumpkin, 1 quart to 300 hills	4 qts.
Cucumber, 1 oz. to 80 hills	1¼ "	Radish, 1 oz. to 150 feet of drill	8 lbs.
Egg Plant, 1 oz. to 2,000 plants	3 oz.	Rye	1½ bu.
Endive, 1 oz. to 300 feet of drill	3 lbs.	Salsify, 1 oz. to 60 feet of drill	8 bu.
Flax, broadcast	½ bu.	Spinach, 1 oz. to 150 feet of drill	10 "
Gourd, 1 oz. to 25 hills	2½ lbs.	Summer Savory, 1 oz. to 400 feet of drill	2 "
Grass, Blue Kentucky	2 bu.	Squash, summer, 1 oz. to 40 hills	2 "
" Blue English	1 "	" winter, 1 oz. to 10 hills	3 "
" Hungarian and Millet	½ "	Tomato, 1 oz. to 3,000 plants	3 ozs.
" Orchard, Perennial Rye, Red Top, Fowl Meadow and Wood Meadow	2 "	Tobacco, 1 oz. to 5,000 plants	3 "
		Turnip, 1 oz. to 250 feet	1½ lbs.
		Vetches	2 bu.

* The above calculations are made for sowing in the spring; during the summer it requires double the quantity to give same amount of plants.

We make no charge for cartage, bags, boxes or packing, excepting on Potatoes and Grass Seeds, but at these prices buyer must pay all Express or Freight charges. Small parcels can go by mail if purchaser desires it. In such cases 10 cents for each pound and 15 cents for each quart must be added to these prices to cover postage. Pecks are sold at bushel rates and one-half pounds are sold at the pound rates.

These prices are subject to change as season advances, depending on shortage or surplus of stock.

Market Gardeners or Other Large Buyers Should Write for Special Prices.

NOVELTIES.

Schindler's New Perfectly Straight

Round Bush Bean.

Of recent introduction, earlier than Best of All and as early as Stringless Green Pod. Very prolific and produces fine straight green pods as round almost as a lead pencil. It has only been planted by a few of the leading market gardeners here; who prized it so highly that they guarded against outsiders getting the seed; until we succeeded in getting seed stock from one of them and are now able to supply this bean in limited quantities. Price per packet, 15c; per quart, 65c; per gallon, \$2.00.

NEW ROUND POD KIDNEY WAX.

The Best Bean yet Introduced.

This new bean, originated by N. B. Keeney & Sons, the well known bean experts of New York State, is the first round-podded Wax Bean we have ever found possessing the excellent market and other shipping qualities of the popular Wardwell's Aidney Wax. The plant grows tall, strong and sturdy, with long, round, handsome, stringless pods of large size, very soild and full of meat, crisp brittle and free from rust; wonderfully early and productive. The earliest and best Wax Bean for either the market or home garden. Try it. Pkt., 10c.; pint 25c.; qt. 45c., by mail, post-paid. By freight or express, qu. 30c.; peck \$1.75; bc. \$6.50.

GINSENG.

The cultivation of Ginseng is now attracting considerable attention and has been found very profitable, commanding \$2.50 to \$3.00 per lb., according to quality.

It is claimed that it produces over 100 lbs. smooth clean roots. Instructions for cultivating same will be given to each purchaser.

Price per packet, 25c.

Used by the Chinese as a Cure-All.

DISCLAIMER.—While we exercise the greatest care to have all seeds pure and reliable and true to name; we do not guarantee or warrant the same, expressed or implied. Nor are we responsible for the crops under any conditions. If the purchaser does not accept these seeds on these terms; they must be returned at once, and the money paid will be refunded.

JOS. A. SCHINDLER & CO.

DIRT BANDS. This is a very useful contrivance to use instead of flower pots; to grow cucumber, squash and other plants under glass, and which are to be set out early in the open ground without injuring the ball. It is a strawberry box, without bottom, and is the cheapest material on the market for this purpose; all that is required is to put two or three small tacks to fasten them together. Put them in rotation in your hot-bed; then fill with good rich soil and sow your seed, say, two or three to a box; when danger of frost is over, use a sharp spade and lift the boxes and carry to the hills to be planted; take a sharp knife and cut the box and the ball will remain whole and the plant will continue to grow without wilting or interruption.

Price, per 1000: \$2.50.

Truck Farmers write us for Special Prices on Large Quantities.
